Housing Terminology
This guidebook uses some terminology, acronyms, or data sources that may be unfamiliar. Here are some definitions.

Affordable Housing
The United States Department of Housing and Urban Development (HUD) considers housing to be affordable if the household is spending no more than 30 percent of its income on housing costs. A healthy housing market includes a variety of housing types that are affordable to a range of different household income levels. However, the term “affordable housing” is often used to describe income-restricted housing available only to qualifying low-income households. Income-restricted housing can be located in public, nonprofit, or for-profit housing developments. It can also include households using vouchers to help pay for market-rate housing (see “Vouchers” below for more details).

American Community Survey (ACS)
This is an ongoing nationwide survey conducted by the U.S. Census Bureau. It is designed to provide communities with current data about how they are changing. The ACS collects information such as age, race, income, commute time to work, home value, veteran status, and other important data from U.S. households. We use data from the ACS throughout this needs assessment.

Area Median Income (AMI)
This is a term that commonly refers to the area-wide median family income calculation provided by the federal Department of Housing and Urban Development (HUD) for a county or metropolitan region. Income limits to qualify for affordable housing are often set relative to AMI. In this report, unless otherwise indicated, AMI refers to the HUD Area Median Family Income (HAMFI).

Cost Burden
When a household pays more than 30 percent of their gross income on housing, including utilities, they are “cost-burdened.” When a household pays more than 50 percent of their gross income on housing, including utilities, they are “severely cost-burdened.” Cost-burdened households have less money available for other essentials, like food, clothing, transportation, and medical care.

Household
A household is a group of people living within the same housing unit. The people can be related, such as family. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit, is also counted as a household. Group quarters population, such as those living in a college dormitory, military barrack, or nursing home, are not considered to be living in households.
Household Income
The census defines household income as the sum of the income of all people 15 years and older living together in a household.

Income-Restricted Housing
This term refers to housing units that are only available to households with incomes at or below a set income limit and are offered for rent or sale at below-market rates. Some income-restricted rental housing is owned by a city or housing authority, while others may be privately owned. In the latter case the owners typically receive a subsidy in the form of a tax credit or property tax exemption. As a condition of their subsidy, these owners must offer a set percentage of all units as income-restricted and affordable to household at a designated income level.

Low-Income
Households that are designated as low-income may qualify for income-subsidized housing units. HUD categorizes families as low-income, very low-income, or extremely low-income relative to HUD area median family incomes (HAMFI), with consideration for family size.

<table>

<tr>
<td>Very Low-Income</td>
<td>50% of HAMFI or less</td>
</tr>
<tr>
<td>Low-Income</td>
<td>80% of HAMFI or less</td>
</tr>
</tbody>
</table>

Median Family Income (MFI)
The median income of all family households in an area. Family households are those that have two or more members who are related. The median income of non-family households is typically lower than for family households, as family households are more likely to have more than one income-earner. Analyses of housing affordability typically group all households by income level relative to HUD area median family income (HAMFI), which is calculated for the county or metropolitan region.
Executive Summary

Housing Needs Key Findings

**Tieton is growing rapidly, and there is a resulting housing shortage.** Vacancy rates for both rentals and homes for sale are approximately 3%. However, that vacancy rate is much lower, since all vacant housing units are listed as “other vacant,” which are not part of either the ownership or rental markets. Low vacancy rates limit housing options, resulting in an increase in competition for available units. With low supply and high demand, housing prices increase across all housing types.

**Housing prices have risen, but so has household income.** The median home value in Tieton has risen by 41% between 2012 to 2022, from $104,000 to $147,000 (assessed value, not fair market value). Over the same period, the median family income has only increased by approximately 60%. Despite this increase in median income, housing is still out of the reach of many Tieton residents.

**28% of households in Tieton are cost burdened.** 28% of all households in Tieton were cost burdened, with 9% being extremely cost-burdened. Cost-burdened households spend a large portion (over 30%) of their available income on housing costs, while extremely cost-burdened households spend over 50% of their available income on housing costs. This leaves less money available for other vital needs like food, transportation, clothing, and education. With rising housing costs, the number of cost-burdened households has almost certainly increased during the past few years.

**Workers travel long distances to jobs both within and outside of Tieton.** Only 31% of those living in Tieton commute fewer than 10 miles, with nearly 30% commuting over 50 miles. Additionally, over 1,000 workers commute to Tieton to work, while only 66 Tieton residents work within city limits. Adequate housing would allow those who work in the city to live there, reducing commute time, economic burden, and greenhouse gas emissions.

**Tieton needs more housing diversity.** Almost 50% of all housing in the City of Tieton are single-family homes. Not all households require, or can afford, that much space. For example, about 30% of all households in Tieton are either single-occupant or two-occupant households. Yet only 2% of housing units in Tieton are studios and only 8% have just one bedroom. Increasing the diversity of housing options available will increase housing supply and provide more choices for residents seeking more affordable housing that meets their current needs.

**Countywide there is a shortage of seasonal farmworker housing.** There are
approximately 4,600 beds of seasonal farmworker housing provided throughout the county, despite over 45,000 seasonal jobs available in the busiest summer months. Identifying safe and sanitary housing facilities for seasonal workers is an important gap to address in Yakima County.

**Land Capacity Key Findings**

The density restrictions in the R-1 zoning district are relatively strict, and available uses are limited. Since the majority of residential zoning in Tieton is zoned R-1, this may be a limiting factor when it comes to meeting housing needs.

There is substantial availability in the R-2 zoning district, with 48% of the zoned area, or 40.2 acres, currently identified as vacant, and another 19% is under-developed. With the high density allowances in this zoning district, this could provide an opportunity for housing that meets the needs of the community. The R-2, alone, could support 884 housing units based on a density of 22 dwelling units per net residential acre.

**Policy Review Key Findings**

Manufactured homes, group homes, and foster care facilities are all identified as priorities within the Comprehensive Plan, but are not currently supported by city ordinance. Re-evaluation of current housing goals regarding these types of housing units may change future goals, but for now this is an incongruency between the comprehensive plan and the municipal code.

Rehabilitation of existing housing stock is identified as a priority, but more could be done to encourage this within the community. Efforts such as partnering with local non-profits or regional consortiums (HOME), utilizing Community Development Block Grants, and developing a historic preservation program may aid in these efforts.

Housing in Tieton is comparatively diverse when looking at other communities in the county. The municipal code does identify and allow a diversity of housing types within the city, though this Housing Action Plan identifies several other options that may be considered.
Introduction
The purpose of a Housing Action Plan is to review current and projected circumstances for housing availability within a community, determine the priorities of the community, and provide some options for the best path forward regarding housing. The entire process is one that involves cooperation between the authors (the Yakima Valley Conference of Governments), city staff, community members, developers, and various county and state organizations. The result is a tool that can be used by the city and by developers in order to determine needs, shape policy, act as a foundation for grants and other funding opportunities, and act as a source of information for any housing initiatives that may be undertaken by public or private entities.

The document is comprised of a number of elements. The Housing Needs Assessment is an overview of demographic, employment, construction, and various other sectors of data, and identifies potential gaps that may exist presently and in the future. Current housing policy is also assessed, and potential barriers and bottlenecks are identified that may be changed in the future in order to allow for various housing types or for development to be more streamlined. Community outreach supplements these findings by asking community members what gaps they see regarding current housing, and what types of housing and efforts they would like to see employed by the city and by developers. The Housing Action Plan considers these gaps and desires, and provides some strategies that may be employed by the city in order to work with developers to meet those needs. It prioritizes strategies based on the priorities presented by city staff and council, and provides some alternative strategies in the appendices.
Development of the Housing Action Plan

Outreach Strategy
In order to craft a Housing Action Plan that accurately represents the needs and desires of the community, public outreach is crucial. The Yakima Valley Conference of Governments (YVCOG) engaged in a number of activities in order to ensure that the public’s voices were heard. There were a handful of events in which the YVCOG received community feedback, and an online survey that asked community members about their opinions on housing options and interests, desired housing types, and housing needs they saw in the community. In Tieton, the YVCOG participated in the Ribbon Cutting of a New Playground event, and surveyed community members about needs and desires they had for housing within the community. Many spoke about difficulties with the code, limited housing, and proposed housing types they would like to see. Additionally, events were held at the middle and high schools in Tieton where YVCOG had similar conversations, and disseminated surveys for community members to take. Finally, posters and postcards with QR cards were sent out, and online access was available for a community housing survey.

In addition to outreach activities, the YVCOG also made several presentations to the Tieton City Council. These presentations focused on the Housing Needs Assessment, strategies for increasing housing availability and options within the city, and a policy analysis that looked at the goals of the Tieton comprehensive plan. These presentations were informative, but also provided the opportunity for community feedback. The Housing Action Plan presented here incorporated this feedback throughout.
Housing Needs Assessment Data and Procedure

The Housing Needs Assessment synthesizes data from a variety of sources in order to highlight needs that exist within the community. It is comprised of community and workforce profiles, a current housing inventory, a gap analysis based on projected growth and construction, an assessment of the current displacement risk in the community, and a land capacity analysis that considers housing opportunities based on vacant, under-utilized, and under-developed parcels.

The data for these analyses is taken from a variety of sources. Demographic data comes primarily from the United States Census Bureau, and includes both Census results and predicted numbers based on previous population counts and projected growth estimates. Construction data, household information, and some employment data also comes from the U.S. Census Bureau, and that source is indicated on the graphs/data listed in the Housing Needs Assessment, as well as the corresponding American Community Survey chart where the information was found. Population predictions were done using a combination of current census data/estimates, projections based on the Washington State Office of Financial Management, and Yakima County predictions by jurisdiction.

Employment data was also gathered from the Washington State Employment Security Department, which tabulates current employment information by county, as well as projected employment in each economic sector over the next ten years. Data on income brackets and household income comes from the Office of Housing and Urban Development, specifically the Comprehensive Housing Affordability Strategy, which takes census data and categorizes it by income bracket with the goal of highlighting housing needs within communities.

The methodologies involved in tabulating and presenting the data vary. Some of the work involved simply graphically representing the data as it was presented in these sources. Other elements involved some in-house calculation by the Yakima Valley Conference of Governments, and those processes are generally articulated in the Housing Needs Assessment.

The process of determining displacement risk was established by the Federal Agency for Toxic Substance and Disease Registry, which developed a mapping system for the Center for Disease Control in order to evaluate social vulnerability. The result, the Social Vulnerability Index (SVI) has been used by various organizations since then to understand the likelihood of displacement in the event of a hazardous event, which in this context could mean events such as job loss, death in the family, an increase in rent, or other unforeseen economic circumstances.

The Land Capacity Analysis element of the Housing Needs Assessment involved utilizing Geographic Information Systems to consider whether parcels within a community were developed, vacant, under-developed (a parcel large enough to be subdivided in order to provide more housing units), or under-utilized (a parcel large
enough to support a higher density of housing, such as a duplex or triplex). The results of this process were maps that indicated parcels that fall within these categories, and data tables that provide specific numbers for parcels and total acreage that could be utilized to meet a community’s housing needs.
Objectives and Strategies

Objective 1: Creating More Diverse/”Missing Middle” Housing Options

The housing in Tieton is relatively diverse, with only 49% of all housing made up of detached single-family houses. While this is commendable, outreach efforts and consultation with staff and council identified more diverse housing options as a priority for the housing.action plan. Expanded housing options provide more opportunities for a variety of people, whether they are first-time home owners, multi-generational families, or people who have been displaced due to financial hardship or other circumstances. In the English language survey of 56 community members, approximately 70% of respondents indicated that they wanted a wider variety of housing options in Tieton, with cottage housing, duplexes/triplexes/fourplexes, and townhouses all receiving substantial portions of the voting for what types of housing they would like to see. There are a number of different initiatives and strategies that a city can take to encourage greater housing variety, and provide options for the “missing middle.” Some are included below, with others found in the appendix on Housing Strategies.

Potential Strategies:

In many communities, the only housing choices are single-family homes on large lots or medium to large multifamily buildings. Such limited options do not reflect the wide range of needs of differing family sizes, household incomes and cultural groups. One solution is encouraging a larger variety of housing types, often referred to as the “missing middle” as they are middle-sized housing, aimed at people with middle-incomes.

In general, these types are more affordable than detached single-family homes and offer a greater range of design and locational choices than apartment buildings can offer. They also offer more flexible ways for communities to add compatible density into established neighborhoods and provide more opportunities for residents to have stability and build wealth through homeownership.

In some cases, such housing types and configurations may not be explicitly prohibited, but code standards such as density limits, lot size minimums, setbacks or parking requirements, along with a lack of code support, creates unpredictability and discourages their construction. Another factor in these housing types “missing” in communities is that local developers, particularly areas outside of the Puget Sound region, lack experience and interest in building these housing types due to greater uncertainty in the financial return. The 2000 Census of housing structures by type shows that 8% of units in incorporated areas in Washington state are two, three and four units. The following are some potential options for “missing middle” housing, as well as some potential policies that can be employed to allow
or encourage these housing types, as well as best practices when considering these housing types:

**Cottage Housing**
Cottage housing typically refers to a cluster of small dwelling units (generally less than 1,200 square feet) around a common open space. The cluster arrangement around a common open space also offers a model that’s been very attractive to empty nesters, singles, couples and even some small families. They offer a development approach that is appropriate and compatible with low-density residential neighborhoods. While the construction cost per square foot is often higher than a larger traditional single-family home, their smaller size makes them more affordable than a typical single-family residence. While cottage clusters may be on a single lot and rented like an apartment complex or divided into separate condominiums, most cottages today are built on fee simple lots with common areas maintained by a homeowners' association.

**Policies**

- Include standards to ensure that porches are required and orient towards common open space(s) and are wide enough to be useful (seven feet wide or more is preferred).
- Create design standards for both common open spaces and semi-private open spaces for individual cottages. Common open spaces should be the focal point of a development with at least half of the cottages in a cluster directly facing the space.
- Require areas for shared use. Ex) lawn areas should be paired with an adjacent hard surfaced patio area. A shared community building could provide a space for gathering and sharing tools.
- Provided shared parking areas off to the side or rear of the development. Attached storage garages are limited to a single vehicle in size and shall be designed to minimize visual and functional impacts on the common open space.

**Duplexes, Triplexes and Fourplexes**
Duplexes are broadly defined as a building that includes two dwelling units. They can be side by side, stacked, or a combination of the two. They are an efficient form of housing often integrated into pre-war residential neighborhoods. Triplexes and fourplexes are similar with three or four units.

**Policies**

- Create design guidance to help multi-unit housing fit into existing neighborhoods. Key design issues include:
• Emphasize that unit entries and windows are directed towards the street.
• Locate driveways and garages to the side of the construction if possible.
• Encourage articulated facades/rooflines to promote neighborhood compatibility.
• Ensure usable private open space.

• Allow duplexes on corner lots in single-family zones when they are designed to look more like single-family homes.
• Create separate minimum setbacks for private garages to reduce their visual impacts and provide enough off-street parking without obstructing sidewalks.
• Consider removing single-family zoning and renaming it low-density residential.

Townhouses
Townhouses are dwelling units that share walls with other residential units, but have their own front stoop or porch, yard or balcony, and are usually owner-occupied. Townhouse buildings typically contain between three to six units. Most units feature their own private garage, located underneath the dwelling unit. Most modern townhouses feature two bedrooms, though many integrate three or four bedrooms.

Policies
• Remove lot size minimums to allow flexibility in the size and design of townhouses, or if lot size standards are used, they should be sized to allow typical two-bedroom units, which typically have a footprint of around 500 square feet. Typical townhouse lots range from 14 feet for a unit with a single car-width garage to 30 feet for larger townhouses.
• Exempt townhouses from internal side yard setbacks.
• Create design standards to ensure that townhouses fit into the existing or desired neighborhood context. Key design issues include:
  o Location and design of driveways and garages in relation to the sidewalk and pedestrian environment
  o Location and design of private internal roads
  o Location and design of unit entries
  o Articulated facades/rooflines
  o Provisions for usable open space
  o Fire department access and service vehicle circulation
Some general policies that can encourage greater diversity in housing types can be found here:

**Increase or Remove Density Limits**

Regulating the maximum number of units per acre is one of the most commonly used tools to regulate the intensity of residential development in Washington jurisdictions. However, there are two notable drawbacks to the units/acre regulating approach beyond simply limiting density:

1. They penalize smaller units by design, as each dwelling unit, whether it is 500 square feet or 5,000 square feet, counts as one dwelling unit. As such the standard can shift development towards larger, more expensive units.

2. Most residents have a difficult time understanding what density looks like. When quizzed on the subject, community members often convey that the design of the streetscape, front yards and building frontages matter more to them.

Removing or relaxing such density limits are ways to increase the supply, diversity and affordability of housing.

**Policies**

- Communicate the need for such change, such as information from the housing needs assessment.
- Communicate the benefits of the strategy and link to community goals and policies.
- Illustrate case studies and example development scenarios to show how proposed changes would work on a key site.
- Couple with other tools to mitigate negative impacts and enhance the design of development. Effectively communicate those tools to community participants. Notable examples:
  - Form-based code or design standards and/or guidelines
  - Height limit, setbacks and minimum open space standards
  - Floor area ratio caps
  - Streetscape improvements (most notably planting strips with street trees)
  - Consider and clarify community infrastructure and service implications.

**Revise ADU Standards**

Accessory dwelling units (ADUs) are small dwelling units that are either attached to the primary dwelling or in a detached structure that is typically placed to the side or rear of the primary dwelling. ADUs have long been an important option for communities to add variety and housing choice in single-family neighborhoods.
ADUs can provide low-cost housing in established neighborhoods. They provide dwelling opportunities for extended family members and small households that prefer a neighborhood setting over apartment living.

Typical ADU ordinances require that such units be placed within or to the rear of a home. This configuration minimizes visual impacts of such units on the streetscape.

**Policies**
- Collaborate with homeowners and prospective ADU developers and renters to help design ADU provisions that balance housing needs while minimizing neighborhood impacts.
- Consider allowing an ADU on any lot regardless of lot size.
- Consider offering pre-designed plans to encourage more ADU development.
- Consider allowing modular units and tiny homes (small dwelling units on a foundation with between 150-400 square feet of habitable floor area) as ADUs.
- Consider allowing the conversion of garages to ADUs.

**Offer Density and/or Height Incentives for Desired Unit Types**
In communities with a deficit of small affordable units and areas where height and/or density bonuses are under consideration, such bonuses to allow for buildings integrating a certain percentage of small units (under a specific size, such as 600 square feet) may be a good option. Alternatively, communities could adjust the way that density is measured to allow for discounts for very small units (i.e., density unit equivalent). On the other hand, many urban communities have a shortage of larger multi-bedroom apartment units to serve families with children. Density bonuses could be used to incentivize developments with such units.

**Policies**
- Small affordable unit incentives will be effective only where market analysis shows a gap in smaller studio and one-bedroom units.
- Consider reducing parking requirements if impacts to the neighborhood from on-street parking demand can be avoided or mitigated.
- Compatibility due to increased density or height may need to be addressed through other provisions.
- Consider the need to meet affordability thresholds when crafting the incentives and requirements for larger multi-bedroom units.
Objective 2: Creating More Low- And Middle- Income Housing

Tieton is a rapidly growing community, and data shows that new residents are diverse in income, living situation, and what they’re looking for in housing type. Outreach results have supported the data, and both low- and middle- income housing have been identified as priorities for current and incoming residents to the community. Fortunately, there are a number of strategies that can ensure that there is a diversity of housing options that can serve the growing community in Tieton. Some of those strategies can be found below. Many of these options overlap with those efforts that create more diverse housing, since offering more housing diversity often coincides with affordability.

Reduce Minimum Lot Sizes
Reducing minimum lot sizes is a key strategy to make efficient use of public infrastructure and increase affordability. It increases a community’s capacity by allowing a greater number of dwelling units, particularly in areas close to transit and other amenities. It also provides ways to develop lots with smaller yards that do not require a lot of time or effort to maintain. In growing communities with significant vacant tracts of land, reductions in the minimum lot size carry one of the best opportunities to accommodate growth needs within compact areas. This can limit the need to expand the urban growth area and expand infrastructure to serve it. Such changes also increase opportunities for homeownership.

Policies
- Establish design standards for lots smaller than 5,000 square feet to ensure layouts that create an attractive streetscape and provide usable private open space for residents.
- Allow zero lot line development and shared-access lots.
- Minimum lot sizes for detached single family dwellings should not be smaller than 2,500 square feet.

Increase Allowed Housing Types in Existing Zones (See Objective 1)
In many communities, the only housing choices are single-family homes on large lots or medium to large multifamily buildings. Such limited options do not reflect the wide range of needs of differing family sizes, household incomes and cultural groups. One solution is encouraging a larger variety of housing types, often referred to as the “missing middle” as they are middle-sized housing, aimed at people with middle-incomes.

In general, these types are more affordable than detached single-family homes and offer a greater range of design and locational choices than apartment buildings can offer. They also offer more flexible ways for communities to add compatible density
into established neighborhoods and provide more opportunities for residents to have stability and build wealth through homeownership.

In some cases, such housing types and configurations may not be explicitly prohibited, but code standards such as density limits, lot size minimums, setbacks or parking requirements, along with a lack of code support, creates unpredictability and discourages their construction. Another factor in these housing types “missing” in communities is that local developers, particularly areas outside of the Puget Sound region, lack experience and interest in building these housing types due to greater uncertainty in the financial return. The 2000 Census of housing structures by type shows that 8% of units in incorporated areas in Washington state are two, three and four units.

**Increase or Remove Density Limits** *(See Objective 1)*

**PUD/PRD and Cluster Subdivisions**

PUDs and PRDs stand for "planned unit development" and "planned residential development," respectively. The terms generally refer to large integrated developments that offer special design, use/housing type mix and development intensity flexibility, provided they conform to the comprehensive plan. Specifically, PUDs and PRDs typically offer flexibility in lot sizes and housing types provided the overall development meets the density provisions of the zone. Some PUDs and PRDs offer density bonuses for achieving specific goals or integrating community amenity features. PUDs and PRDs often also allow flexibility in the design of street and other public improvements, provided they meet specific criteria. Thus, PUDs and PRDs can be a good tool to integrate a greater mix of lot and housing types to meet community demographic needs while providing environmental benefits of clustering housing to help preserve sensitive natural areas and/or provide a greater amount of usable community open space.

Some communities are increasingly allowing the clustering and lot size averaging benefits of PUDs and PRDs through standard zoning and subdivision provisions. Clustering usually includes the grouping of lots together on smaller-than-normal parcels to provide opportunity to preserve open spaces, critical areas or unique landforms that otherwise would not likely be preserved. Lot size averaging allows developers to subdivide land into a variety of lot sizes, provided the average lot size in the development meets the minimum, often allowing for more efficient use of land and potential for additional housing units. These tools also provide for more compact roadway arrangements, expanded common open space and allow the possibility for different size home choices. This arrangement within the standard subdivision process can create more predictability for the applicant by simplifying the development review process and eliminating or minimizing the possibility of costly conditions of approval.
Policies
- Allow cluster subdivision design in the standard subdivision process, without the need to go through additional review procedures typical of PRD or PUDs.
- Consider compatibility standards to avoid major differences in lot sizes compared to existing development.
- Consider density or other incentives to increase the diversity and affordability of lot and housing types in cluster subdivisions.

Manufactured Home and Tiny House Communities
Some cities are starting to adopt local codes to allow tiny houses as an affordable housing option that is in line with community desires for sustainability, limited visual impact, and preservation of open space.

Policies
- Consider allowing different options for tiny house integration, including:
  - Tiny houses as detached accessory dwelling units.
  - Tiny house clusters or villages – designed in a manner similar to cottage housing clusters.
- Tiny house density/massing and review process:
- Consider allowing a higher number of these units than typical units for the zone, due to the small size of tiny houses. Some density increase is essential because the units are smaller and usually more expensive to build on a cost-per-square-foot basis.
- Consider applying a maximum floor area ratio limit or an across-the-board allowed density for tiny houses, such as one tiny house per 1,200-square-foot lot area.
- Tiny house design elements: Provide design standards in a manner similar to cottage housing clusters:
- Consider providing design standards for both common open spaces and semi-private open spaces for individual units.
- Permit construction of a shared community building to provide a space for gathering and sharing tools.
- Consider how parking can be integrated with tiny house clusters.
In addition to the zoning/process strategies found above, additional strategies address affordable housing incentives. Some of these can be found below:

**Multifamily Tax Exemption**

A multifamily tax exemption (MFTE) is a waiver of property taxes to encourage affordable housing production and redevelopment in "residential targeted areas" designated by cities. The goal of MFTE programs is to address a financial feasibility gap for desired development types in the target areas, specifically to develop sufficient available, desirable and convenient residential housing to meet the needs of the public. The urban centers that are the typical targets for this tax exemption policy are often near transit, jobs and amenities, and MFTE programs are designed to encourage denser growth in areas with the greatest capacity and significant challenges to development feasibility.

RCW 84.14 allows certain cities planning under the GMA to grant qualified residential and mixed-use projects a property tax exemption under an MFTE program for the value of new residential improvements, rehabilitation, or conversion of residential buildings in the designated areas. This can currently take two forms:

- An eight-year tax exemption can be offered for multifamily projects which meet base requirements.
- A 12-year exemption is allowed for projects that incorporate a minimum percentage (typically 20%) of income-restricted units.

Cities can also limit MFTEs specifically to projects that incorporate only income-restricted units.

**Gaps Addressed**

- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very low-income housing
- Housing near transit, amenities and/or jobs

**When and Where Applicable**

Available to cities with 15,000 or higher population, or others as determined by RCW 84.14.

- Eight-year MFTE programs with no affordability requirements are most effective and appropriate in cities having trouble attracting private developers to build multifamily housing anywhere within their borders.
- Cities with strong housing markets that are already seeing multifamily development may consider offering only a 12-year option to encourage the inclusion of income-restricted affordable housing development. When both
options are available, profit-motivated developers will typically select the eight-year option.

- MFTE “residential target areas” should be selected in conjunction with designated urban centers that lack residential housing options, including affordable housing.\(^\text{21}\)
- Recommended in areas of high demand, such as along transit corridors and near amenity clusters or job centers.

Potential Drawbacks

- Loss of property tax revenue through the eight- or 12-year term of exemption on the value of residential improvements.
- If the incentive is offered to projects that would otherwise already be feasible, this policy may have little practical benefit. A 2019 report showed that in the majority of areas, rents for "affordable units" were higher than market rents.\(^\text{22}\)
- Affordability covenants expire after 12 years and cannot be renewed, which means that affordable MFTE units are not part of the long-term affordable housing supply.

Policies

- Carefully map target zones for implementation to meet local goals.
- Conduct pro forma analyses of sample projects to estimate a developer’s expected return on investment under different scenarios. This can be helpful to calibrate requirements such as the amount of affordable units and affordability levels to maximize the benefits without discouraging use of the incentive by developers. Some local governments require this analysis as part of the application.
- Affordability levels are set within statute but may be adjusted to meet local circumstances. Review market rents to ensure that affordability levels provided by the exemption are reduced rents compared to market rents.
- Layering MFTE with other incentives for affordable housing, such as density bonuses, fee reductions or planned actions, can magnify the overall effects.

Time/Capacity/Skill Needed

In-house staff can perform policy design and implementation. Annual monitoring of affordability of the designated units will be needed (RCW 84. 14.100).

Resources

- Affordable Housing - MRSC (see Multifamily Tax Exemption section)
- Housing Market Policy Dashboard - City of Tacoma - Allows users to explore the potential outcomes of housing policy scenarios (including MFTE and inclusionary zoning) on the feasibility of development and projected affordable housing development.
• Bellingham code 17.82.030: Eight-year exemptions are available for projects in residential target areas and 12-year exemptions for projects incorporating 20% or more income-restricted affordable housing units.
• Vancouver code 03.22: Target areas include the downtown core and a buffer surrounding their BRT service route. An eight-year exemption is offered for all projects of four+ units, and a 12-year exemption for projects incorporating 20% of income-restricted units for residents at 60% area median income (AMI).

**Alternative Development Standards for Affordable Housing**
Jurisdictions can relax development regulations in return for affordable housing development as an incentive. One common strategy is to reduce minimum parking requirements for projects that include affordable housing. This is often implemented by reducing or eliminating the required number of parking stalls per unit only for the income-restricted affordable units in a new development. Other alternative development standards that are commonly used to encourage affordable housing are Reducing Minimum Lot Sizes, Increasing Building Height, Offering Density and/or Height Incentives for Desired Unit Types, and Reducing Setbacks, Lot Coverage and/or Impervious Area Standards. In return for flexibility in development standards, RCW 36.70A.540, Affordable Housing Incentive Programs, requires affordability for at least 50 years.

**Gaps Addressed**
- Housing diversity
- Affordable homeownership
- Middle-income rental housing
- Very-low income housing

**When and Where Applicable**
- Parking minimums will be most effective/applicable for multifamily housing, especially where expensive structure parking would otherwise be needed.
- Minimum lot size reductions are most meaningful in older residential areas where the original platted lot size is smaller than the zoning district’s minimum lot size or in residential zones with undeveloped tracts that could be subdivided.

**Potential Drawbacks**
See relevant housing strategies for details.

**Policies**
- These often work most effectively as part of a broader package of incentives to encourage affordable housing production.
- Where flexibility is allowed by code, ensure flexibility for affordability is clear.
Time/Capacity/Skill Needed
See relevant housing strategies for details. Annual monitoring of affordability of the designated units will be needed.

Resources
RCW 36.70A.540: Affordable Housing Incentive Programs

Pierce County offers several alternative design standards in its Affordable Housing Incentives. See Pierce County Affordable Housing Incentives: Independent Evaluation and Recommendations to Increase Effectiveness (BERK Consulting, 2019).

Fee Waivers for Affordable Housing
Fee waivers reduce the up-front cost of construction for residential development. Fees, such as impact fees, utility connection fees and project review fees, can run in the thousands per unit for residential properties in some jurisdictions. Waiving some, or all, of these fees for income-restricted units can be a valuable incentive for encouraging the creation of income-restricted affordable units. This incentive is most effective when paired with a larger incentive package for affordable housing.

Gaps Addressed
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

When and Where Applicable
All residential and mixed use areas.

Useful to promote integration of affordable housing units within market rate developments.

Potential Drawbacks
- Loss of revenue for public amenities such as parks, schools and infrastructure improvements
- For impact fees, municipalities may need to backfill a portion of payments for waived fees (RCW 82.02.060(3))

Policies
- Offer this incentive along with a suite of financial and/or regulatory incentives to promote income-restricted affordable housing.
• Ensure that the length of time units are required to remain affordable and the income brackets to whom they must cater are in parity with the benefits received for the community and authorizing statute.

**Time/Capacity/Skill Needed**
Planning department staff can implement regulatory benefit and annual monitoring of affordability of the designated units. Coordination with other city departments on fee waivers will be needed.

**Resources**
Affordable Housing - MRSC (See "Waiver of Fees or Standards" Section)

RCW 82.02.060(3) authorizes cities, counties and towns to grant impact fee exemptions for affordable housing. Jurisdictions may choose a partial exemption of not more than 80% of impact fees, in which case there is no explicit requirement to pay the exempted portion of the fee from public funds other than impact fee accounts; or provide a full waiver, in which case the remaining percentage of the exempted fee must be paid from public funds other than impact fee accounts.

A city or town may waive or delay collection of tap-in charges, connection fees or hookup fees for low-income persons connecting to water, sanitary or storm sewer service, electricity, gas and other means of power and heat (RCW 35.92.380 (1980), RCW 35.92.020(5)).

RCW 36.70A.540 authorizes affordable housing incentive programs including fee waivers or exemptions.

Pierce County Code 18A.65: Fee waivers are offered for building fees, traffic impact fees, school impact fees, park impact fees, sanitary sewer system/facilities charge and preliminary plat application fees.

*There are also multiple ways to support funding affordable housing. Some of those options are found below:*

**Local Option Taxes, Fees and Levies**
Cities may provide direct project funding, through grants or loans, to encourage the production of income-restricted affordable housing. Securing this funding can occur in different ways:

**A local housing tax levy**, authorized through RCW 84.52.105, can allow up to $0.50 per $1,000 of property tax to be allocated toward an affordable housing fund for projects serving very-low income households (50% median family income or less) if approved by a majority of the voters of the taxing district. Housing levy funds may be used for a variety of purposes detailed in an affordable housing finance plan such as for matching funding for not-for-profit housing developments. This support can improve a project’s competitiveness for receiving additional
financing from state or national sources. The county, city or town that imposes the levy must declare an emergency with respect to the availability of housing that is affordable to very low-income households in the district. SB 6212 (laws of 2020) expands the use of this tax to include affordable homeownership, owner-occupied home repair and foreclosure prevention programs for low-income households up to 80% of median family income as of October 1, 2020.

**Sales and use tax:** With voter approval, counties can pass a sales and use tax of up to 0.1% to fund affordable housing programs serving households with incomes below 60% of the AMI and within specific categories. These categories include individuals with mental illness, veterans, senior citizens, homeless families with children, unaccompanied homeless youth, persons with disabilities, or domestic violence victims (RCW 82.14.530).

**Real Estate Excise Tax (REET 2):** A city or town planning under GMA can impose an additional 0.25% real estate excise tax ("REET 2") under RCW 82.46.035. This requires voter approval only for communities voluntarily planning under GMA. Revenues may be used only for financing “capital projects” in the capital facilities plan element of the comprehensive plan, which may include building, rehabilitating/repairing and/or purchasing affordable housing.

**Other funds:** See MRSC's Revenue Guide for Washington Cities and Towns for updated information.

**Gaps Addressed**
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

**When and Where Applicable**
This strategy is best suited for communities that face a shortage of very low income-restricted affordable housing whose community would support such a tax, fee or ballot measure (if required).

In the case of REET 2, this is most effective in communities that are seeing active markets and significant real estate sales.

**Potential Drawbacks**
- A housing levy must be approved by the voters and may be assessed for only 10 years.
- There is a financial cost to local residents subject to the property tax levy, or to new homeowners with REET 2.
- REET 2 funding is restricted to projects in the capital facilities plan.
• A sales and use tax must be approved by the voters. No more than 10% of the revenue may be used to supplant existing local funds. If a county imposes this tax after a city located within that county has imposed this tax, the county must provide a credit against its tax for the full amount imposed by the city.

**Policies**
- Coordinate city funding with other known funding sources for maximum impact.
- Work with area groups to develop information about ballot initiatives, demonstrating the types of housing needs in the community.

**Time/Capacity/Skill Needed**
Staff time to create and administer program, including development of an affordable housing financing plan or amendments to the Capital Facilities Plan to direct the expenditure of funds.

**Resources**
- Affordable Housing - MRSC (See "Affordable Housing Property Tax Levy" Section)
- Affordable Housing - MRSC (See "Affordable Housing Sales Tax" Section)
- Real Estate Excise Tax - MRSC
- Example legislation from Bellingham and program description in Vancouver
- Sample real estate tax ordinance from San Juan County

**Local Housing Trust Fund**
Housing trust funds are distinct funds established by local governments that receive an ongoing source of dedicated funding to support housing affordability. They can be designed to meet the most critical housing needs in each community.

**Gaps Addressed**
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

**When and Where Applicable**
Communities with sufficient capacity to manage a housing trust fund and generate sufficient capital for desired outcomes. Can also be coordinated at the county and regional level.

**Potential Drawbacks**
Requires management of the fund.
Policies
- Leverage additional funding from state or national programs (e.g., Community Development Block Grants) to maximize the benefit of dollars raised.

Time/Capacity/Skill Needed
Staff time to report on the distribution and use of funds.

Resources
- General Information on Housing Trust Funds at Housingtrustfundproject.org
- Bellingham Home Fund

Partner with Local Housing Providers
Local governments may want to coordinate with local housing groups and non-profit developers to look for shared goals and identify ways both groups can work together. This may include identifying property, crafting incentives, developing housing assistance programs, supporting grant applications, code enforcement, property owner assistance or other programs to help increase affordability and reduce homelessness.

Gaps Addressed
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

When and Where Applicable
- Any town can work with its development community to craft custom solutions that address most urgent needs and leverage available resources. If assisting with low-income housing tax credit (LIHTC) applications, it is important to remember distinctions between the 9% and 4% programs.
- The 9% program is administered through a competitive application process, with preference for projects targeting lower-income households.
- The 4% program is typically preferred for for-profit developers and often focuses on workforce housing. Although nominally it was not designed as a competitive process, limited availability of the associated bonds has meant that this process has become competitive as well.

Potential Drawbacks
- Jurisdictions have limited capacity. Forging partnerships and developing concepts that achieve shared goals can be a time-intensive process.
- Projects owned by private or non-profit developers may have affordability covenant expiration dates.
Policies

- Reach out broadly to identify local organizations, resources and housing needs of high-need groups, such as the disabled, elderly or homeless.
- The city can support applications, but tax credits are applicable for developers only.

Time/Capacity/Skill Needed
Work can be done in-house. Established relationships with the development community can help promote partnerships that lead to positive outcomes.

Resources

- ULI Guidebook on successful Public-Private Partnerships
- Snohomish County Affordable Housing Trust Fund

Funding Resources for Affordable Housing
There are a variety of sources of funding for affordable housing, and normally several forms of funding are required to make a project feasible. Below are some of the more prominent funding sources available.

Low-Income Housing Tax Credit (LIHTC) program. This program is a federal initiative that authorizes affordable housing developers to sell tax credits to investors to generate equity for development costs. Investors can use the credits to reduce their federal tax liability. In Washington, this program is administered through the Washington State Housing Finance Commission (WSHFC) for projects building units affordable at the 60% area median income (AMI) level for 30 years. Through LIHTC, there is a 9% tax credit program and 4% tax credit program. Nationally, the LIHTC program has helped to create over 3 million affordable housing units over 30 years, according to the National Multifamily Housing Council.

Washington State Housing Trust Fund. The Department of Commerce manages these funds that provide amortized loans, deferred loans and recoverable grants to support projects that acquire, build and/or rehabilitate affordable housing. Units must be accessible to households earning up to 80% of the AMI, with federal HOME funding requiring affordability at 50% AMI. A covenant is typically secured to ensure that the required affordability of units is maintained for 40 years.

HUD/FHA Loans. These loan programs support affordable housing projects by allowing for more favorable lending terms than private-market providers will offer. The Section 221(d)(4) program insures construction loans for new construction or substantial rehabilitation of moderate- and low-income rental housing that contains five units or more. The Section 223(f) program insures mortgages for the purchase or refinance of existing multifamily housing.

United States Department of Agriculture (USDA) Grant and Loan Programs. The USDA offers a variety of programs aimed at increasing affordable multifamily
rental housing in rural areas. These include: Housing Preservation and Revitalization Demonstration Loans and Grants, Housing Preservation Grants, Multifamily Housing Direct Loans and Multifamily Housing Loan Guarantees.

**Community Development Block Grants (CDBGs).** These grants are federal funds administered to smaller cities/towns and counties for projects that improve the economic, social and physical environment. CDBG funding cannot be used for new housing construction. It can, however, be used for housing rehabilitation, homeownership assistance, affordable housing plans and infrastructure projects that support affordable housing development. Specific CDBG grants are available to Native communities through the [Indian Community Development Block Grant Program (ICDBG)](https://www.hud.gov/states/washington/community/cdbg). ICDBG funds have added flexibility that allows for land acquisition to support new housing and, under some circumstances, new housing construction. Some communities get funding directly from HUD; Commerce administers funds for the balance of the state.

**Resources:**
- Information Resources from WSHFC, including list of all active LIHTC rental properties in Washington
- Housing Trust Fund Handbook
- HUD/FHA loan information
- USDA programs for developers
- Department of Commerce description of various CDBG funding programs and resource lists: [https://www.commerce.wa.gov/serving-communities/community-development-block-grants/](https://www.commerce.wa.gov/serving-communities/community-development-block-grants/)
- Local CDBG program manager contact information: [https://www.hud.gov/states/washington/community/cdbg](https://www.hud.gov/states/washington/community/cdbg)
Objective 3: Preserving And Restoring Existing Housing Stock

Preserving and rehabilitating existing housing stock is a crucial part of ensuring community members have enough housing. While housing development can add housing stock to the market, if houses are lost due to neglect, then the result will be a net zero gain. Below are some strategies that may be employed to preserve housing stock in Tieton, along with some best practices for implementing these strategies and resources for these types of efforts.

**Local Housing Trust Fund**

Housing trust funds are distinct funds established by local governments that receive an ongoing source of dedicated funding to support housing affordability. They can be designed to meet the most critical housing needs in each community.

**Gaps Addressed**
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

**When and Where Applicable**

Communities with sufficient capacity to manage a housing trust fund and generate sufficient capital for desired outcomes. Can also be coordinated at the county and regional level.

**Potential Drawbacks**

Requires management of the fund.

**Policies**
- Leverage additional funding from state or national programs (e.g., Community Development Block Grants) to maximize the benefit of dollars raised.

**Time/Capacity/Skill Needed**

Staff time to report on the distribution and use of funds.

**Resources**

- Bellingham Home Fund
Funding Resources for Affordable Housing
There are a variety of sources of funding for affordable housing, and normally several forms of funding are required to make a project feasible. Below are some of the more prominent funding sources available.

Low-Income Housing Tax Credit (LIHTC) program
This program is a federal initiative that authorizes affordable housing developers to sell tax credits to investors to generate equity for development costs. Investors can use the credits to reduce their federal tax liability. In Washington, this program is administered through the Washington State Housing Finance Commission (WSHFC) for projects building units affordable at the 60% area median income (AMI) level for 30 years. Through LIHTC, there is a 9% tax credit program and 4% tax credit program. Nationally, the LIHTC program has helped to create over 3 million affordable housing units over 30 years, according to the National Multifamily Housing Council.

Washington State Housing Trust Fund
The Department of Commerce manages these funds that provide amortized loans, deferred loans and recoverable grants to support projects that acquire, build and/or rehabilitate affordable housing. Units must be accessible to households earning up to 80% of the AMI, with federal HOME funding requiring affordability at 50% AMI. A covenant is typically secured to ensure that the required affordability of units is maintained for 40 years.

HUD/FHA Loans
These loan programs support affordable housing projects by allowing for more favorable lending terms than private-market providers will offer. The Section 221(d)(4) program insures construction loans for new construction or substantial rehabilitation of moderate- and low-income rental housing that contains five units or more. The Section 223(f) program insures mortgages for the purchase or refinance of existing multifamily housing.

United States Department of Agriculture (USDA) Grant and Loan Programs
USDA offers a variety of programs aimed at increasing affordable multifamily rental housing in rural areas. These include: Housing Preservation and Revitalization Demonstration Loans and Grants, Housing Preservation Grants, Multifamily Housing Direct Loans and Multifamily Housing Loan Guarantees.

Community Development Block Grants (CDBGs)
These grants are federal funds administered to smaller cities/towns and counties for projects that improve the economic, social and physical environment. CDBG funding cannot be used for new housing construction. It can, however, be used for housing rehabilitation, homeownership assistance, affordable housing plans and infrastructure projects that support affordable housing development. Specific CDBG grants are available to Native communities through the Indian Community Development Block Grant Program (ICDBG). ICDBG funds have added flexibility
that allows for land acquisition to support new housing and, under some circumstances, new housing construction. Some communities get funding directly from HUD; Commerce administers funds for the balance of the state.

**Resources:**

- HUD/FHA loan information
- USDA programs for developers
- Department of Commerce description of various CDBG funding programs and resource lists: https://www.commerce.wa.gov/serving-communities/community-development-block-grants/
- Local CDBG program manager contact information: https://www.hud.gov/states/washington/community/cdbg

**Strategic Acquisition and Financing of Existing Multi-family Housing**

To better retain affordable housing, cities and housing authorities can catalog naturally occurring affordable housing and housing with income restrictions or covenants that are about to expire. Some of this information could be found in the HNA or with further analysis of HNA data. Cities, counties, and housing authorities may then identify funds to acquire existing multifamily buildings that serve low- or moderate-income residents to avoid displacement of residents. Selected properties should be likely targets for redevelopment with residents otherwise unable to afford to stay in the neighborhood or projects with expiring affordability contracts. Alternatively, public funds can support private or non-profit owners of buildings with expiring affordability covenants, as discussed in the next strategy. This practice preserves existing communities and retains long-term affordable housing stock.

**Support Third-Party Purchases of Existing Affordable Housing**

Community-based organizations, non-profits and community land trusts can be important property owners within a neighborhood. Using public resources to empower trusted institutions can preserve or create affordable housing and space for community-serving organizations and businesses. Municipal and other funds can assist these institutions in land and property acquisition efforts that preserve affordable housing and prevent displacement within a neighborhood.
Implementation and Monitoring

The objectives in this Housing Action Plan can be addressed in a variety of ways. This plan has included a number of strategies that have been recommended, but the city is not limited to these options. In order to implement these strategies, some actions can be taken. Below are some of the strategies recommended in this plan (some of the strategies are self-explanatory), as well as implementation actions that can be taken in order to employ those strategies. The implementation actions vary with regards to the cost and staff time required to employ them.

**Objective 1: Creating More Diverse/”Missing Middle” Housing Options**

**Strategy: Missing Middle Housing Types (Cottage Housing, Duplexes/Triplexes/Fourplexes, Townhouses)**

**Potential Actions:**
- Define missing middle housing types in the land use section of the municipal code, and determine which zoning districts would support this type of housing. The land use table should reflect where these housing types are permitted, and what level of review is required;
- Include design criteria for missing middle housing options that are consistent with the goals of the city with regards to space, aesthetics, and function;
- Consider parking requirements, and whether they will be associated with each individual unit or as a communal parking lot;
- Consider removing single-family zoning and renaming it low-density residential, with density requirements rather than unit requirements.

**Strategy:**

**Increase or Remove Density Limits**

**Potential Actions:**
- Utilize outreach to communicate the benefits of such a change, and the potential for allowing more housing types;
- Employ design criteria that ensures that while density may increase, neighborhood character, space, aesthetics, and function would remain consistent;
- Consider and communicate that higher density relieves pressure on public services by serving more people with less infrastructure.

**Strategy:**

**Implement/Revise Accessory Dwelling Unit (ADU)/Accessory Apartment Standards**
Potential Actions:
- Work with homeowners and developers to develop ADU provisions that balance housing needs while minimizing neighborhood impacts;
- Define Accessory Dwelling Unit/Accessory Apartment in the land use section of the municipal code, and determine which zoning districts would support this type of housing. The land use table should reflect where this housing type is permitted, and what level of review is required;
- Offer pre-designed and pre-approved plans for ADU’s to encourage more ADU development;
- Allow conversion of garages to ADU’s.

Objective 2: Creating More Low- And Middle-Income Housing

Strategy: Reducing Minimum Lot Sizes

Potential Actions:
- Establish design criteria to ensure that while lot sizes might be diminished, neighborhood character, space, aesthetics, and function would remain consistent;
- Reduce setback requirements, even to the point of allowing zero lot line development and shared-access lots

Strategy: Increase Allowed Housing Types in Existing Zones

Potential Actions:
- Define a variety of housing types in the land use section of the municipal code, and determine which zoning districts would support these types of housing. The land use table should reflect where these housing types are permitted, and what level of review is required;
- Include design criteria for housing options that are consistent with the goals of the city with regards to space, aesthetics, and function.

Strategy: Planned Unit Development (PUD)/Planned Residential Development (PRD)

Potential Actions:
- Allow PUD/PRD’s that have their own design criteria, design standards, and allow for higher density;
• Allow PUD/PRD’s to undergo standard subdivision process rather than additional review procedures typical of PUD/PRD’s;
• PUD/PRD’s are an opportunity to be flexible with design criteria such as setbacks, building height requirements, and parking requirements. This may allow for higher density and more “missing middle” housing options.

Strategy:
Manufactured Home and Tiny House Communities

Potential Actions:
• Consider allowing higher density for tiny houses and manufactured homes, since their footprint is substantially smaller than conventional homes;
• Consider allowing smaller lot sizes for tiny houses and manufactured homes;
• Consider providing design standards for both common open spaces and semi-private open spaces for individual units.
• Consider if parking would be required for individual units or if a communal parking lot would suffice.

Objective 3: Preserving and Restoring Existing Housing Stock

Strategy:
Local Housing Trust Fund

Potential Actions:
• Leverage additional funding from state or national programs (i.e. Community Development Block Grants) to maximize the benefit of dollars raised.
Monitoring

The goal of a Housing Action Plan is to ensure that housing is available for all members of the community, and that those with special housing needs have their needs met. In order to ensure that progress has been made to achieve these fundamental goals, there are several indicators that should be tracked. Below are three potential key indicators, but cities are not limited by these indicators, and may choose others depending on what their priorities are. Strategies may be employed to address concerns, depending on the result of tracking these key indicators.

Key Indicator 1: Housing Production by Type

In order to monitor progress of these goals, monitoring programs must be developed that track the number and types of housing available, and the number and types of housing that is being produced. To do this, one best practice is monitoring building permits processed by the city over the course of the year. When doing this, it is important to note the type of housing that is being produced, so that it’s clear that the needs of the community are being met. Additionally, any housing that is being produced that accommodates those with special housing needs (income-restricted households, seniors, those with independent living difficulties, etc.).

Types of housing to be counted include single-family housing, duplexes, triplexes, fourplexes, accessory dwelling units/accessory apartments, multi-family housing complexes, manufactured home/tiny homes, and any additional “missing middle” housing types the city may incorporate.

Key Indicator 2: Cost Burdened Households

One of the key indicators of housing needs within the community is the number of households that are cost-burdened. A cost-burdened household spends over 30% of their annual income on housing, which includes mortgage/rent payments, taxes, utilities, etc… An extremely cost-burdened household spends over 50% of their income on housing and affiliated costs. Communities vary substantially when it comes to cost-burdened households. For example, for some communities, renter-occupied households are more likely to be cost-burdened, whereas in other communities owner-occupied households suffer from being cost-burdened more frequently. In all situations, however, a cost burden indicates that housing is not affordable for those who live within that community. By monitoring the number of cost-burdened households within a community, the city can react based on the results (for example implementing some of the strategies found in this Housing Action Plan that address specific concerns). The Department of Housing and Urban Development, specifically the Comprehensive Housing Affordability Strategy (CHAS) data, reflects current trends with regards to income brackets and cost-burdened households. However, cities may also engage in more localized efforts to determine the extent of cost-burdened households within their communities.
Key Indicator 3: Vacancy Rate

Vacancy rates are an indicator of the number of vacant housing units within a community, and can be broken down by rentals and houses for sale. If the vacancy rate is too low, prices and displacement risk rise. The ideal vacancy rate, for both rentals and houses for sale, is approximately 5%. A 5% vacancy rate allows for flexibility within the market, but also ensures that the market continues to grow at a manageable rate. If the city maintains a record of vacancy rates, it can respond to shortages by utilizing some of the strategies included in this housing action plan. There are various ways that vacancy rates can be calculated. Census data provides some predictions on vacancy rates, but utility bills are also a good indicator of the vacancy rate within a city. Other tools for doing this include utilizing code enforcement officers, tracking certificates of occupancy, and developing localized programs for tracking vacancies.

INTRODUCTION

The City of Tieton has a Professional Service Contract with the Yakima Valley Conference of Governments to develop a Housing Action Plan. This Housing Needs Assessment will help inform and guide the selection of actions to include in the Housing Action Plan.

It provides an evaluation of current housing supply and housing needs in Tieton, across the full spectrum of household types and income levels, by answering the following kinds of questions:

• Who lives and works in Tieton and what are their socioeconomic characteristics?
• What types of housing are available in Tieton?
• Are there any groups of people who are not able to find housing that is safe, affordable, and meets their household needs?
• How much housing, and what types of housing, are needed to meet current and future housing needs of Tieton residents?

The data in this Housing Needs Assessment will be synthesized with information gathered through engagement to develop a Housing Action Plan for the City of Tieton.
SUMMARY OF KEY FINDINGS

- **Tieton is growing rapidly, and there is a resulting housing shortage.** Vacancy rates for both rentals and homes for sale are approximately 3%. However, that vacancy rate is much lower, since all vacant housing units are listed as “other vacant,” which are not part of either the ownership or rental markets. Low vacancy rates limit housing options, resulting in an increase in competition for available units. With low supply and high demand, housing prices increase across all housing types.

- **Housing prices have risen, but so has household income.** The median home value in Tieton has risen by 41% between 2012 to 2022, from $104,000 to $147,000 (assessed value, not fair market value). Over the same period, the median family income has only increased by approximately 60%. Despite this increase in median income, housing is still out of the reach of many Tieton residents.

- **28% of households in Tieton are cost burdened.** 28% of all households in Tieton were cost burdened, with 9% being extremely cost-burdened. Cost-burdened households spend a large portion (over 30%) of their available income on housing costs, while extremely cost-burdened households spend over 50% of their available income on housing costs. This leaves less money available for other vital needs like food, transportation, clothing, and education. With rising housing costs, the number of cost-burdened households has almost certainly increased during the past few years.

- **Workers travel long distances to jobs both within and outside of Tieton.** Only 31% of those living in Tieton commute fewer than 10 miles, with nearly 30% commuting over 50 miles. Additionally, over 1,000 workers commute to Tieton to work, while only 66 Tieton residents work within city limits. Adequate housing would allow those who work in the city to live there, reducing commute time, economic burden, and greenhouse gas emissions.

- **Tieton needs more housing diversity.** Almost 50% of all housing in the City of Tieton are single-family homes. Not all households require, or can afford, that much space. For example, about 30% of all households in Tieton are either single-occupant or two-occupant households. Yet only 2% of housing units in Tieton are studios and only 8% have just one bedroom. Increasing the diversity of housing options available will increase housing supply and provide more choices for residents seeking more affordable housing that meets their current needs.

- **Countywide there is a shortage of seasonal farmworker housing.** There are approximately 4,600 beds of seasonal farmworker housing
provided throughout the county, despite over 45,000 seasonal jobs available in the busiest summer months. Identifying safe and sanitary housing facilities for seasonal workers is an important gap to address in Yakima County.
HOUSING TERMINOLOGY

This guidebook uses some terminology, acronyms, or data sources that may be unfamiliar. Here are some definitions.

Affordable Housing
The United States Department of Housing and Urban Development (HUD) considers housing to be affordable if the household is spending no more than 30 percent of its income on housing costs. A healthy housing market includes a variety of housing types that are affordable to a range of different household income levels. However, the term “affordable housing” is often used to describe income-restricted housing available only to qualifying low-income households. Income-restricted housing can be located in public, nonprofit, or for-profit housing developments. It can also include households using vouchers to help pay for market-rate housing (see “Vouchers” below for more details).

American Community Survey (ACS)
This is an ongoing nationwide survey conducted by the U.S. Census Bureau. It is designed to provide communities with current data about how they are changing. The ACS collects information such as age, race, income, commute time to work, home value, veteran status, and other important data from U.S. households. We use data from the ACS throughout this needs assessment.

Area Median Income (AMI)
This is a term that commonly refers to the area-wide median family income calculation provided by the federal Department of Housing and Urban Development (HUD) for a county or metropolitan region. Income limits to qualify for affordable housing are often set relative to AMI. In this report, unless otherwise indicated, AMI refers to the HUD Area Median Family Income (HAMFI).

Cost Burden
When a household pays more than 30 percent of their gross income on housing, including utilities, they are “cost-burdened.” When a household pays more than 50 percent of their gross income on housing, including utilities, they are “severely cost-burdened.” Cost-burdened households have less money available for other essentials, like food, clothing, transportation, and medical care.

Household
A household is a group of people living within the same housing unit. The people can be related, such as family. A person living alone in a housing unit, or a group of unrelated people sharing a housing unit, is also counted as a household. Group quarters population, such as those living in a college dormitory, military barracks, or nursing home, are not considered to be living in households.
Household Income
The census defines household income as the sum of the income of all people 15 years and older living together in a household.

Income-Restricted Housing
This term refers to housing units that are only available to households with incomes at or below a set income limit and are offered for rent or sale at below-market rates. Some income-restricted rental housing is owned by a city or housing authority, while others may be privately owned. In the latter case the owners typically receive a subsidy in the form of a tax credit or property tax exemption. As a condition of their subsidy, these owners must offer a set percentage of all units as income-restricted and affordable to households at a designated income level.

Low-Income
Households that are designated as low-income may qualify for income-subsidized housing units. HUD categorizes families as low-income, very low-income, or extremely low-income relative to HUD area median family incomes (HAMFI), with consideration for family size.

</tr>
<tr>
<td>Very Low-Income</td>
<td>50% of HAMFI or less</td>
</tr>
<tr>
<td>Low-Income</td>
<td>80% of HAMFI or less</td>
</tr>
</tbody>
</table>

Median Family Income (MFI)
The median income of all family households in an area. Family households are those that have two or more members who are related. The median income of non-family households is typically lower than for family households, as family households are more likely to have more than one income-earner. Analyses of housing affordability typically group all households by income level relative to HUD area median family income (HAMFI), which is calculated for the county or metropolitan region.
COMMUNITY PROFILE

Tieton is a town located in the Yakima Valley, situated in the foothills of the Cascade Mountains. It’s known for its beautiful natural scenery and agricultural production. The population is diverse, and numbers just over 2,000 residents. Tieton has a strong sense of community, with many local events and festivals held throughout the year, including Arts and Humanities events, fundraising events, and block parties.

Tieton has a rich history that is closely associated with the development of the Yakima Valley. The town was founded in the early 1900’s by settlers who were drawn to the area’s fertile land and abundant water supply. Over the years, Tieton became a center for fruit growing and processing, with orchards and packing houses dominating the local economy. Today, agriculture remains a significant part of Tieton’s economy, along with small businesses and tourism. Despite its small size, Tieton has a vibrant and close-knit community that celebrates its history and works to support local businesses and organizations.

Population

Tieton’s population was estimated to be 2,044 in 2021 and has grown substantially over the last decade. The 2010 Census showed a population of only 1,125, representing nearly 100% growth over the last 10 years. Based on predicted growth from a county level, the population of Tieton is expected to reach approximately 2,255 by 2040. However, based on observed population growth over the last decade, expected population growth by 2040 could reach as many as 7,369 people. Because of this, predicting housing needs for Tieton is difficult. For this assessment, we used a predicted rate of 3%, which splits the difference between the 1.3% predicted at the county level and the 6% observed over the last ten years. With a 3% expected annual growth rate, the population of Tieton is expected to reach approximately 2712 by 2040.

As of 2021, the population breakdown by age bracket can be found in Figure 1. Tieton is a young town, with 45% of its population being under the age of 18, 52%
of its population falling within the working age of 18-64, and only 3% of the population estimated to be over the age of 65 (Figure 1).

Households

The U.S. Census Bureau identified 520 occupied housing units in 2021. 280 of those housing units were owner-occupied, while 240 were renter-occupied. Average occupancy per household was approximately 3.9, with 15% of households having 1 person, 14% of households having 2 people, 21% of households having 3 people, and nearly 50% of households having 4 or more people living in the household (Figures 2 and 3).

![Housing Units by Tenure](image)

*Figure 2: Source ACS Survey Chart DP04*
Housing units in the community reflect the relatively high occupancy rate of Tieton’s households, with most housing units having 3 or more bedrooms (Figure 4).

**Household Income and Cost-Burdened Households**

Residents of Tieton represent a variety of income levels. The median household income is $51,742, with a higher median income for renter-occupied households.
($57,578) than owner-occupied households ($51,667). A breakdown of the household incomes by bracket can be found in Figure 5.

![Tieton Population by Annual Income](chart.png)

Despite a relatively high annual median income, approximately a quarter of households in Tieton are considered cost-burdened. Cost-burdened households spend more than 30% of their annual income on housing, whereas extremely cost-burdened households spend more than 50% of their annual income on housing.

- Figure 6 shows the number of overall cost-burdened households at each income level.
- Figures 7 and 8 show what those figures look like for renter-occupied and owner-occupied households, respectively.

Out of 520 occupied households in Tieton, approximately 145 (28%) are considered cost-burdened, and 48 are extremely cost-burdened (9%).

![Households with a Cost Burden >30% at Each Income Bracket](chart2.png)
Figure 8: Source CHAS

Owner-Occupied Households with a Cost Burden >30% at Each Income Bracket

Figure 7: Source CHAS

Renter-Occupied Households with a Cost Burden >30% at Each Income Bracket
Residents with Special Housing Needs

Compared to other communities in the county, Tieton has a comparatively low number of residents with special housing needs. However, that number is still substantial, and accommodation must be made for those with special housing needs. These needs can be a result of households that fall within one of the low, very low, or extremely low-income brackets, are individuals with disabilities, seniors who require assistance, and a variety of other reasons. While these specific housing needs are addressed in other sections of the Housing Needs Assessment, some general takeaways can be seen in Table 1.

WORKFORCE PROFILE

Note: Some of the information used for this report was gathered in 2019, prior to the COVID pandemic. The pandemic had a significant impact on the economy, resulting in changes in employment and an increase in remote work. Future reports will reflect these changes. Additionally, projections in this report are based on existing data, and are a best guess as to future employment numbers.

Countywide Employment

In Yakima County, out of a labor force of approximately 137,157 (as of Oct 2022), 130,754 are employed, representing 4.7% unemployment, slightly higher than the 4.0% unemployment seen statewide. The median income in the county is $31,950 for individuals, with the median household income being $61,012. Inflation-adjusted per capita income in the county in 2020 was $49,099, compared to the state rate of $67,126 and the national rate at $59,510. The primary industries for the county include agriculture, forestry and fishing (27.8%), health services (14.9%), local government (11.8%), retail trade (9.6%), and manufacturing (7.2%). Payroll for these industries generally reflects their share of the labor force, with agriculture, forestry, and fishing accounting for 22.5%, health services for 16%, local government for 14.6%, manufacturing for 8.9%, and retail trade for 7.7%.

The commuting time for the county averages 20.8 minutes, with about 20.3% of the working population of the county commuting over 30 minutes to their places of work. The most common means of transportation was driving in a car, truck, or van alone. 77% of the county’s population travels to work in a vehicle alone, 12.5% of the population carpools, 1.8% of the population walks or rides a bicycle, and .1% of the population takes public transportation. 7.5% of the county does their work from home.

The poverty rate in the county in 2020 was 14.8%, higher than the state’s average of 9.5% and the national average of 11.4%. 
City Employment Trends

The employment trend for the City of Tieton is substantially agricultural, with 32% of the jobs in the city being in the agriculture industry. Other top industries include transportation/warehousing (17%), wholesale trade (13%), health care and social assistance (13%), and construction (6%) (Figure 1). The median income for individuals in the city is approximately $22,478, with median household income being approximately $51,742.

Figure 9: Employment by Industry in Tieton, 2021; Source: United States Census Bureau, 2021: ACS 5-Year Estimates Data Profiles, OnTheMap
The area has a job-housing ratio of 2.39, exceeding the preferable range of 0.75-1.5. This has resulted in much of the workforce living outside of Tieton. As is seen throughout the county, commuting to or from Tieton is common.

- Only approximately 31% of those living in Tieton have a commute time of less than 10 miles.
- Roughly 34.1% of the workforce commutes over 25 miles, with 29.4% commuting over 50 miles.

Overall, approximately 510 people live in Tieton but commute elsewhere for work, whereas approximately 1014 people live outside Tieton and work in the area. Approximately 66 people both live and work in Tieton (Figure 10).
Employment Projections

The Washington State Employment Security Department maintains projected growth in industries on a regional basis. For non-farm labor, the city of Tieton falls into the South-Central region of the state, and so employment growth in the city is calculated by applying the presumed growth in the region to the breakdown in workforce by industry. Farm labor is calculated at the county level, and so that rate has also been calculated and included for the agricultural sector. The results can be found in Table 2 and can be used as a best guess for future growth within these industries in the city. The total number of workers can be found in the first column (2021), with projected jobs in the 2025 and 2030 columns.

HOUSING INVENTORY

The housing inventory data was gathered through a variety of sources including the U.S. Census Bureau, local housing providers and nonprofit organizations. Data is organized into type of housing, number of bedrooms, own or rent, and subsidized housing. The intent is to provide a snapshot of the type of housing that currently exists to determine if it is meeting the community’s projected needs.

Housing Supply Characteristics

Housing units in Tieton are predominantly single-family detached houses, comprising 49% of the total housing units. The next largest portion is made up of mobile homes with 26%, with 1-unit attached housing units comprising 15% of total housing units. The remaining 10% of housing units are made up of multi-family housing of various types (Figure 11).

![Tieton Housing Units by Type](Figure 11: Source ACS Chart DP04)

Tenure in Tieton is split relatively even between owner-occupied and renter-occupied households, with owner-occupied households comprising 54% of total households, and renter-occupied households comprising the other 46%. The average household size for the city of Tieton is 3.9 people per household. As of writing, 14 households are estimated to be vacant, but this is a misleading statistic (see Gap Analysis).
The largest proportion of housing units in Tieton are 3-bedroom housing units. Of the 540 total housing units in Tieton, approximately 50% are 3-bedroom, with 4-bedroom housing units comprising 20% of all units, and 2-bedroom units comprising 16% of all units. The breakdown of all housing units can be seen in Figure 12.

Subsidized Housing

Tieton currently has several options available for people with special needs, and people that fall within certain income brackets. Currently, there are approximately 125 units available for those who need some sort of assistance or qualify for subsidies. The majority of units are for people of low, very low, and extremely low income, which comprise approximately 26% of the households in Tieton. These unit types vary from apartments to single-family homes and may have various qualifications in addition to income requirements, such as disabilities, senior status, and assisted living requirements. Subsidized housing makes up approximately 23% of the current housing in Tieton.
**GAP ANALYSIS**

The City of Tieton is growing rapidly, and with this growth come new challenges when it comes to housing. Proactive planning is required to meet the current demands and continue to provide housing for a diverse population. In Tieton over the last ten years, there has been a boom in construction of housing. However, this has failed to match the increase in population. Additionally, as construction has occurred the lowest income brackets are often left with fewer options for affordable housing. A low vacancy rate has made living in the city difficult for some, especially the most vulnerable. This section will illustrate the gap that presently exists, present some rough forecasts on the development of this disparity, and describe the housing that will be required at various income levels within the city.

**Current and Future Housing Disparity**

The current population of the City of Tieton is estimated to be 2044, a dramatic increase from the population of 1125 in 2010. There are approximately 520 occupied households in the city, with 14 vacant households. The occupied households are split almost evenly between owner-occupied and renter-occupied (Table 3).

The overall vacancy rate for the city is approximately 3%, not quite meeting the desired standard for vacancy of 5%. However, upon closer inspection of the vacancy rate, it’s clear that there is a severe housing shortage. For owner-occupied and renter-occupied housing units, the vacancy rate is functionally 0%, both falling outside of the desired standard. The majority of the vacancy rate is classified as either “Sold, not occupied” or “Other Vacant,” which the census defines as “year-round units which were vacant for [other] reasons: For example, held for settlement of an estate, held for personal reasons, or held for repairs.” Other potential reasons include foreclosure, legal proceedings, preparation to rent/sell, storage, abandonment, or extended absence. While the vacancy rate falls almost within the desirable standard, the reality is that the vacancy rate is better reflected by the 0% rates that exist for owner-occupied and renter-occupied homes.

Projections for future building are encouraging, based on numbers from 2011-2021. By 2040, the population of Tieton is expected to reach approximately 2,712. With an average household size of 3.9, this will require an additional 170 housing units serving a variety of income levels. From 2011 to 2021, Tieton underwent a housing boom, with the average annual number of housing units constructed being 9.1 housing units per year. If that trend continues, by 2040 there will be 164 new housing units, falling just short of the required 170 housing units. While current construction trends would come close to the required units by 2040, income level and variety of housing units must also be considered.

**Housing Disparity by Income Level**

In Tieton, the population represents a broad spectrum of income levels, and in order to prevent these groups from being cost-burdened, housing needs to reflect that diversity. The median household income for the City of Tieton is $51,742, with 80% of Annual Median Income (AMI) being $41,394, 50% AMI being $25,871, and 30% AMI being $15,523. The percentage of the population of Tieton that falls within these income brackets can be seen in Figure 13, and their relative affordable housing limits can be seen in Table 4. The calculations in Table 4 were completed with the understanding that spending more than 30% of a household income on housing results in a household becoming cost-burdened.
Housing trends for the city of Tieton are a bit difficult to predict. The only ACS data that exists is from 2010-2012, and recently from 2020-2021. However, based on the difference in median rental prices and median home values between 2012 and 2021, some general trends are apparent. The current median rental value (as of 2021) is approximately $945/mo., exceeding the affordable monthly rent of people that fall below approximately 73% of median household income. Similarly, homes in Tieton have a median home value of $146,900, exceeding the affordable home value for people who fall below approximately 60% of median household income. It should also be noted that home value calculations are done using assessor data, rather than fair market value from real estate sales, and only consider principal and interest payments and not insurance, HOA, or taxes.

Table 4: Affordable Monthly Rent and Home Value by Income Bracket

<table>
<thead>
<tr>
<th>Income Distribution</th>
<th>Annual Household Income</th>
<th>Affordable Monthly Rent</th>
<th>Affordable Home Value</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>30% AMI</td>
<td>$15,523</td>
<td>$388</td>
<td>$73,291</td>
</tr>
</tbody>
</table>
Furthermore, for both monthly rent and home values, the median has been increased substantially over the previous ten years and is likely to continue to increase. This increase has been driven by increasing prices across the board, but also a decline in affordable units. Unlike many communities in Washington, the number of affordable rentals has stayed relatively consistent. From 2010 to 2021, the number of rentals available at less than $500/mo. fell from 53 to 46, a 14% decrease. However, the number of homes valued at less than $150,000 fell substantially, from 90 to 57, representing a 36% decrease. Homes valued at higher than $300,000 also increased from 3 in 2010 to 16 in 2021. With approximately one quarter of the households in Tieton falling under 50% AMI, home values and rental prices must stay within a range indicated in Table 5 to remain accessible to those within that income bracket.

Of the 170 housing units projected to be needed by 2040, 26 should be affordable to those falling into the 30% AMI income bracket or below, 19 should be affordable to those between 30% AMI and 50% AMI, 18 should be affordable to those between 50% AMI and 80% AMI, and 107 should be affordable to those at 100% AMI and above. Overall, 26% of new housing should be affordable to those households living at 50% AMI or below. An additional 21% of new housing should be affordable to those making 50%-100% of Tieton’s AMI, and 63% of new housing should be affordable to those making over 100% of Tieton’s AMI or above (Table 6).

*Table 5: Required Housing at Each Income Level by 2040 in Tieton, WA*
HOUSING DISPLACEMENT RISK

Housing displacement risk is a complex issue that refers to the risk of being forced out of one’s home or community due to various economic, social, or environmental factors. The consequences of housing displacement can be severe and long-lasting, often leading to homelessness, social dislocation, and economic hardship.

Economic forces, such as rising housing costs, gentrification, and redevelopment, are among the most common causes. As cities grow and prosper, land values increase, and property owners seek to maximize their profits by converting low-income housing into more expensive properties. This can lead to the displacement of low-income residents who can no longer afford to live in their communities.

Environmental factors can also play a significant role in housing displacement risk. Natural disasters, such as hurricanes, floods, and wildfires, can destroy homes and force residents to relocate. Climate change, including rising sea levels and increasing temperatures, is also exacerbating housing displacement risk by making some areas uninhabitable or too expensive to live in.

Social factors, such as discrimination and displacement due to political conflicts or war, can also lead to housing displacement. In some cases, marginalized communities are forcibly removed from their homes to make way for development projects or to create "safer" neighborhoods.

Homelessness, social dislocation, and economic hardship are common outcomes for those who are displaced from their homes. Displaced residents may struggle to find affordable housing in a new location or may have to leave behind important social networks and support systems. Displacement can also disrupt educational opportunities for children and lead to lower educational outcomes.

The impact of housing displacement is particularly acute for vulnerable populations, such as low-income households and immigrants. These groups often face significant barriers to accessing affordable housing and may be more likely to experience housing displacement.

Addressing housing displacement risk requires a comprehensive approach that includes policy solutions, community engagement, and equitable development strategies to ensure that all residents have access to safe, affordable, and stable housing. It also requires investment in affordable housing and infrastructure to support sustainable communities.

Housing Displacement Risk Mapping – Methodology

The Washington State Department of Commerce has provided guidance on mapping displacement risk within communities. That guidance relies on information that isn’t readily available to communities in Eastern Washington. Therefore, a replacement measurement has been identified as a means to assess displacement risk within our
communities. That measurement is the Federal Agency for Toxic Substances and Disease Registry (ATSDR).

ATSDR has developed a mapping system for the Center for Disease Control and Prevention’s (CDC) Social Vulnerability Index (SVI) that identifies communities that are likely to be at the highest risk for needing support during or after hazardous events. The SVI mapping uses many metrics that also illustrate displacement risk. Those metrics fall into four groups: Socioeconomic Status, Household Composition and Disability, Minority Status and Language, and Housing Type and Transportation. Those metrics combined result in an Overall SVI Value, which is used to gauge displacement risk.

The Overall SVI Value is a number that ranges from 0 to 1. A ranking of 0 means that there is low displacement risk, with 1 being a high displacement risk. The SVI mapping is broken down into Census Tracts.

**Housing Displacement Risk - Tieton**

There is one Census Tract in Tieton, which gives a limited view of displacement risk for the city. The details for the census tract can be found in Figure 14. The overall SVI value for the city is .914, putting it at a moderate risk for displacement due to social or economic hardship.
Figure 14: Source Social Vulnerability Index, YVCOG
LAND CAPACITY ANALYSIS

A Land Capacity Analysis (LCA) is a methodology conducted by counties and cities to determine the amount of vacant, developed, under-developed, and under-utilized lands. This process identifies the potential for land within a community's boundaries to accommodate anticipated housing growth, given its current zoning restrictions. This was done for Tieton by reviewing the Zoning Ordinance to determine which zoning districts allow for residential development, and then identifying which parcels were either developed, under-developed, or vacant. Maps and tables have been created showing the location of the parcels as well as the total land area for each classification.

Vacant lands are lands without any residential development located on them. Developed lands are lands with housing developed. Under-developed lands are lands that are large enough to be divided and more housing units built upon them. Under-utilized lands are lands that could be developed with a higher density than currently exists. An example of an under-utilized lot is one that has a single-family residence but is capable of having a duplex placed upon it.

The table below shows the breakdown of zoning districts that allow residential development, their minimum lot sizes, and the resulting residential density shown as the number of dwelling units per net residential acre.

<table>
<thead>
<tr>
<th>Zoning District</th>
<th>Minimum Lot Size</th>
<th>Density</th>
</tr>
</thead>
<tbody>
<tr>
<td>R1 – Single Family Residential</td>
<td>7,200 for SFR</td>
<td>&lt;=6 DU/NRA</td>
</tr>
</tbody>
</table>
| R2 – High Density Residential | 6,200 for SFR  
7,200 for duplex + 1,800 for additional units | <= 22 DU/NRA |
| R-3 – Rural Residential   | 21,780 for SFR                         | <=2 DU/NRA    |
| R-4 – Residential Retail  | 6,200 for SFR  
7,200 for Duplex + 1,800 for additional units | Up to 22 DU/NRA |

The analyses below show that there is enough capacity within Tieton’s vacant lands for an additional 1,484 housing units.
R1 – Single Family Residential

The R1 Residential District has a total of 227 parcels totaling approximately 147.5 acres. 51.6 acres of that area is developed lands, while 69.11 acres are undeveloped, and 26.8 acres are considered underdeveloped.

The map below illustrates the location of the properties within Tieton that are within the R1 Zoning District and where they are located within the city. Using the highest density allowed in the zoning district, vacant lands have the potential to accommodate an additional 414 housing units, based on a density of 6 dwelling units per net residential acre.
R2 – High Density Residential

The R2 Residential District has a total of 164 parcels totaling approximately 84.2 acres. 48% of that area, or 40.2 acres, is vacant land. Approximately 33% are developed, with the remaining 19% under-developed.

The map below illustrates the parcels that are within the R2 Residential Zoning District and where they are within the city.

Using the highest density allowed in the zoning district, vacant lands have the potential to accommodate an additional 884 housing units, based on a density of 22 dwelling units per net residential acre.
R3 – Rural Residential District

The R3 Residential District has a total of 27 parcels totaling approximately 111.5 acres. 4% of that area, or 4.5 acres are developed lands. Approximately 32% is under-developed, with the remaining 64% vacant.

The map below shows the location of parcels within the R3 Residential District. Using the highest density allowed in the zoning district, vacant lands have the potential to accommodate an additional 142 housing units, based on a density of 2 dwelling units per net residential acre.
R4 – Retail Residential District

The R4 Retail Residential District has a total of 53 parcels totaling approximately 7.3 acres. 1.3 acres of that area is currently vacant, with 6 acres being developed. The map below shows the location of parcels within the R4 Retail Residential District. With a maximum density of 22 DU/NRA, if the vacant lots of the R4 Retail Residential District were developed they could provide 44 additional housing units.
**Underutilized Residential**

Under-utilized lots were determined by identifying which zoning districts allow for a higher housing density than single-family residences and which lots are large enough to allow for a duplex at a minimum, but currently have a single-family residence placed on them. The lot size needed to accommodate a duplex is 7,200 square feet or approximately 0.17 acres. The analysis shows that within the four districts that allow for residential development, there are 96 lots that are under-utilized. The total area is approximately 77 acres.
Appendix 3: Policy Review

Housing Policy Review

Analysis of Progress to Meet Housing Goals
The 2017 Tieton Comprehensive Plan predicted population would grow at a rate of approximately 2.4%, with the town growing from a population of 1,285 in 2016 to 1,589 by 2025. It predicted that an additional 160 housing units would be required to accommodate for that growth. However, observed growth has been substantially higher, and in 2021 the population of Tieton was estimated to be 2,044. Using an estimated rate of 3%, which is higher than the county average, but lower than the observed population growth in Tieton, the expected population by 2040 is 2,712 people.

Housing construction has boomed in the city, as well, with the average annual number of housing units constructed between 2011 and 2021 being 9.1 housing units per year. Additionally, two large developments have recently been built in the city, which have added substantially to housing stock. Based on the goals established in the 2017 Comprehensive Plan, Tieton has met its housing target of 160 housing units, having built approximately 173 housing units between 2016 and 2021. However, vacancy rates are still low due to the rapid population growth of the city. These low vacancy rates also contribute to a slower rate of growth than previously observed, since available housing units are limited and out of the price range of many people wanting to move to Tieton.

Comprehensive Plan Review
Goals and Policies of the Housing Element of the Tieton Comprehensive Plan

GOAL 1: Provide safe and sanitary housing for all persons within the community.

Policy reviewed:
Policy 1.1: Support the development of a housing stock that meets the varied needs of the present community while attracting higher income residents.

Objective 1: Encourage the construction of new units to increase the local housing supply. New construction should provide for a moderate, to low income and elderly market demand as well as upscale residences. It should also provide for an appropriate mix of housing types and intensities (single-family, multifamily).

Objective 2: Encourage subdivisions that are well designed and compatible with neighboring land uses.

Objective 3: Allow, on individual lots in all residentially zoned areas, manufactured housing that meets accepted standards for site-built homes.
**Objective 4:** Establish provisions to ensure that possible future development of group homes and foster care facilities are provided in suitable areas.

**Objective 5:** Encourage and support the rehabilitation of older homes.

Objectives 1 and 2 have been satisfied by current zoning ordinance and results of the Housing Needs Assessment.

Objective 3 has not been achieved, since currently only R2 and R4 zoning districts allow for manufactured homes, and manufactured home communities are allowed only as conditional uses.

Objective 4 has not been achieved, since currently only R1 and R3 zoning districts allow for these uses, and only as conditional uses.

Objective 5 could be better supported by a more robust historical preservation element and/or ordinance. Historic preservation does exist within the Critical Areas Ordinance, but only refers to structures on the National Historic Register. Additionally, non-profit organizations and the Community Development Block Grant program offer opportunities for the rehabilitation of older homes, especially for those who do not have the means to maintain them.

**Analysis:**

Policy 1.1 aligns with data from the Housing Needs Assessment. The HNA shows that Tieton’s community is varied when it comes to socio-economic categories, and many groups experience substantial cost burdens. The objectives currently outlined in the housing element attempt to address this disparity, as well as provide housing for those with special housing needs. Compared to other communities in the county, Tieton has a comparatively low number of residents with special housing needs. However, much has been done to address these needs, and the objectives outlined here align with that goal.

Policy 1.1 has demonstrated moderate progress, with objectives 1 and 2 having been met within city ordinance, but objectives 3 and 4 being restricted by city ordinance. Objective 5 could be better supported. Though Critical Areas regulations require an element of historic preservation, more could be done within the municipal code and within administration to protect and expand recognition of historic places within Tieton. These efforts would expand housing opportunities and preserve housing stock. Additional outreach to non-profit organizations, and the utilization of Community Development Block Grants would also aid in these efforts.

**Policy Reviewed:**

**Policy 1.2:** Support the implementation of public housing programs that supplement the efforts of local developers in meeting the housing needs of the community.
Objective 1: Pursue programs to expand the housing options of low- and moderate-income groups and the elderly.

Objective 2: Coordinate public programs with the activities of local developers to provide for the optimal utilization of community resources.

Analysis: The City of Tieton has worked alongside non-profit organizations such as Catholic Charities and Habitat for Humanity in order to expand housing options for people with special housing needs.

Policy Reviewed:

Policy 1.3: Monitor housing availability.

Objective 1: Develop a record keeping system that accurately measures the impact of programs on local housing problems.

Objective 2: Develop an evaluation system that accurately measures the impact of programs on local housing problems.

Objective 3: Make current housing information available to potential developers and encourage its use in the consideration of development alternatives.

Objective 4: Provide for the periodic updating or existing plans and the ongoing analysis of housing problems.

Analysis: The Housing Needs Assessment and Housing Action Plan will provide some guidelines for evaluating housing stock within the City of Tieton.

GOAL 2: Residential areas that are safe, sanitary and attractive places to live will be established and maintained in Tieton.

Policy Reviewed:

Policy 2.1: The City of Tieton will ensure and facilitate the provision of municipal services appropriate to the density of residential development.

Objective 1: The cost of providing municipal services to serve new residential developments will be borne by the developer.

Objective 1 has been achieved. TMC 16.6 outlines these requirements, which implement consistent development standards and require municipal services to be paid for by the developers/applicants.

Policy Reviewed:

Policy 2.2: The City of Tieton will work cooperatively with other public agencies, private institutions, and organizations to foster housing rehabilitation in suitable areas.
Policy 2.2 has been supported, but should continue to be. Recent cooperation with Habitat for Humanity and Catholic Charities has resulted in many new housing units available for low-income households. Further efforts toward this goal may involve utilizing community development block grants or partnering with additional non-profit organizations. While new units are helpful, the policy here refers to maintaining existing housing stock, which is essential for providing more housing in Tieton.

**Analysis:**
Goal 2 of the housing element ensures that Tieton remains a safe, sanitary, and attractive community. In order to do so it requires that developers cover the cost of municipal services, improvements, and extensions, which is written into the municipal code. This ensures that tax payers are not burdened with the cost of these improvements, and that current and future development enjoys the benefits of municipal services. Furthermore, the city has worked alongside other public agencies, private institutions, and organizations to housing rehabilitation. Related to Policy 1.1, Objective 5, more could be done to recognize historic structures and protect and rehabilitate those structures to increase and preserve housing stock in Tieton.

**GOAL 3:** Encourage a mixture of housing types and densities throughout the sub-area that are compatible with public service availability.

**Policy Reviewed:**
**Policy 3.1:** Support the development of regional strategies to address the housing needs of the unincorporated areas of the county.

*Objective 1:* Land use controls shall govern the distribution of housing types by establishing overall density.

*Objective 2:* Density of development shall be based on the existing land use pattern, the availability of public services, municipal service plans and the provision of services by the developer.

*Objective 3:* Criteria shall be developed for establishing levels of service required for different densities of development.

Objectives 2 and 3 have been achieved, but will need to be supported as housing construction expands.

**Analysis:**
Goal 3 of the housing element emphasizes the importance of a variety of housing options for residents of Tieton. Currently, approximately 49% of the housing stock in Tieton are single family detached homes, with an additional 26% of housing stock being manufactured or mobile homes. Despite these large proportions of housing being in these two categories, housing in Tieton is comparatively diverse.
when looking at the rest of the county. The average rate county-wide for single-family detached homes is between 65%-80%, which puts Tieton in a favorable position when it comes to housing diversity. However, many categories of what would be considered “missing middle” housing are not defined or addressed in the Tieton Municipal Code. These include structures such as townhouses, cottage housing, and accessory dwelling units. These types of housing would contribute to the diversity Goal 3 refers to, and would also contribute to varied density within the city.

Zoning and Subdivision Code Review
The City of Tieton has four different categories of residential zoning ranging in density from rural residential to residential retail, which allows for zero lot line development. Title 17 of the Tieton Municipal Code regulates these zoning districts, and outlines requirements for single-family dwellings, duplexes, and multifamily dwellings. Title 16 regulates subdivisions, and provides specifications for processing and design standards. Specifics regarding many missing middle housing categories such as cottage housing, accessory dwelling units and townhouses are not specifically defined and regulated, and so fall into the single-family, duplex, and multi-family categories and regulations. As written, the zoning and subdivision ordinance aligns well with the goals and policies of the housing element of the Tieton Comprehensive Plan.

Zoning Districts
The Tieton Municipal Code allows for housing in the following residential zoning districts:
- Single-Family Residential (R1 Zone)
- High Density Residential (R2 Zone)
- Rural Residential (R3 Zone)
- Residential Retail (R4 Zone)

Types of Housing
The Tieton Municipal Code provides the following definitions for the types of housing allowed within the city:

**Dwelling Unit** means one or more rooms within a building or apartment house designed for occupancy by one family.

**Dwelling, duplex** means a singular building designed for occupancy of two families living independently of each other. These are not an identified use in the zoning ordinance, but would be classified as multi-family.

**Dwelling, multifamily** means a singular building containing three or more one-family dwelling units.
Dwelling, single-family means a singular building designed for the occupancy of one family.

Mobile/manufactured home means a detached single-family dwelling unit having the following characteristics:

- Designed for long-term occupancy and containing sleeping accommodations, a flush toilet, a bathing tub or shower, kitchen facilities, and plumbing and electrical connections provided for attachment to outside systems
- Designed to be transported on its own wheels or on flatbed or other trailers or detachable wheels.
- Situated at the site where it is to be occupied as a dwelling and ready for occupancy, located on foundation supports and connected to utilities and services common to single-family dwelling units.

Mobile Home Park means a parcel of land that has been town approved for the exclusive siting of mobile homes on individual spaces.

Zero lot line development is not defined in the TMC, but refers to zero lot line homes, which is a type of single-family home that is attached to another, sharing a common wall but on separate parcels. Townhouses can be classified as zero lot line developments.

Types of housing allowed in each residential zoning district:

Appendix 4: Housing Strategies

Zoning and Housing Option Strategies

Common housing needs include increasing housing supply, increasing housing diversity, affordable homeownership, middle-income rental housing, senior housing, and very low-income housing. The following housing strategies seek to address these needs, and include options for amending zoning restrictions, diversifying housing options, and increasing infrastructure accessibility.

Organization of Each Strategy

Each housing strategy on the following pages is organized in the following manner:

- **Introduction** – describes the strategy and some of its components
- **Gaps addressed** – identifies the type of housing gaps that can be typically addressed via this strategy
- **When and where applicable** – clarifies the community typology or specific type of zoning or situation the strategy applies to
- **Potential drawbacks** – highlights potential downsides to consider in implementation
- **Tips for success** – identifies the details and/or supporting actions that will improve chances for success based on experience with the strategy in other communities
- **Time/capacity/skill needed** – notes situations where additional expertise or capacity may be required to develop and implement elements of a strategy, which may influence its feasibility
- **Resources** – provides additional external resources that can give further assistance with the development and implementation of the strategy

Reduce Minimum Lot Sizes

Reducing minimum lot sizes is a key strategy to make efficient use of public infrastructure and increase affordability. It increases a community’s capacity by allowing a greater number of dwelling units, particularly in areas close to transit and other amenities. It also provides ways to develop lots with smaller yards that do not require a lot of time or effort to maintain. In growing communities with significant vacant tracts of land, reductions in the minimum lot size carry one of the best opportunities to accommodate growth needs within compact areas. This can limit the need to expand the urban growth area and expand infrastructure to serve it. Such changes also increase opportunities for homeownership.

Policies

- Establish design standards for lots smaller than 5,000 square feet to ensure layouts that create an attractive streetscape and provide usable private open space for residents.
• Allow zero lot line development and shared-access lots.
• Minimum lot sizes for detached single family dwellings should not be smaller than 2,500 square feet.

**Integrate Floor Area Ratio Standards**

Floor area ratio (FAR) is the ratio of a building's total floor area (gross floor area) to the size of the piece of land upon which it is built. Since FAR focuses entirely on building massing, it’s often seen as a good alternative to density regulations (maximum number of lots or dwelling units per acre) in multifamily and mixed-use zones. This option can allow for a greater number and mix of unit types and sizes since the number of units isn’t regulated. FAR standards are also often used in addition to density regulations where there’s a strong desire to limit the number of dwelling units and the size of buildings.

**Policies**

• Create design guidelines to ensure that such buildings can be well integrated into the existing and planned community context.

• Consider creating a 3-D massing model to test FAR limits and help to communicate how potential development might be integrated into the community context. Use caution with such models, however, and clearly communicate that such models are for illustrative purposes only. Carefully consider the appropriate level of detail that might work best for your particular context (e.g., conceptual massing models will be less expensive to develop and may be more effective in some cases, while a more detailed photo-realistic model might be more appropriate where ground level views are sought).

• Consider how FAR is calculated. The basic concept is to calculate all visible floor area (i.e., floor area above grade). The terms should clarify what’s included in floor area calculations (e.g., partial floors? vaulted ceiling space? below-grade space?). Some communities don’t count desired elements, such as structured parking, affordable units, community meeting rooms or other communal spaces.

• Consider using FAR for infill development to complement the scale of existing development. For example, examine the typical FARs of existing residential buildings and consider applying an FAR standard that’s generally consistent with the established pattern. Then adjust the list of permitted housing types and/or density to match objectives. Additional setback, lot coverage and/or other site/building design standards might supplement the FAR standards to help meet community design and compatibility goals.
Increase Allowed Housing Types in Existing Zones

In many communities, the only housing choices are single-family homes on large lots or medium to large multifamily buildings. Such limited options do not reflect the wide range of needs of differing family sizes, household incomes and cultural groups. One solution is encouraging a larger variety of housing types, often referred to as the “missing middle” as they are middle-sized housing, aimed at people with middle-incomes.

In general, these types are more affordable than detached single-family homes and offer a greater range of design and locational choices than apartment buildings can offer. They also offer more flexible ways for communities to add compatible density into established neighborhoods and provide more opportunities for residents to have stability and build wealth through homeownership.

In some cases, such housing types and configurations may not be explicitly prohibited, but code standards such as density limits, lot size minimums, setbacks or parking requirements, along with a lack of code support, creates unpredictability and discourages their construction. Another factor in these housing types “missing” in communities is that local developers, particularly areas outside of the Puget Sound region, lack experience and interest in building these housing types due to greater uncertainty in the financial return. The 2000 Census of housing structures by type shows that 8% of units in incorporated areas in Washington state are two, three and four units.

Housing Structure by Type in Washington State

Based on 2000 U.S. Census data for statewide occupied housing units in incorporated areas, [www.ofm.wa.gov](http://www.ofm.wa.gov).

Note: du/acre = dwelling units per acre

Cottage Housing

Cottage housing typically refers to a cluster of small dwelling units (generally less than 1,200 square feet) around a common open space. The cluster arrangement around a common open space also offers a model that’s been very attractive to empty nesters, singles, couples and even some small families. They offer a development approach that is appropriate and compatible with low-density residential neighborhoods. While the construction cost per square foot is often higher than a larger traditional single-family home, their smaller size makes them more affordable than a typical single-family residence. While cottage clusters may be on a single lot and rented like an apartment complex or divided into separate condominiums, most cottages today are built on fee simple lots with common areas maintained by a homeowners’ association.
Policies

- Include standards to ensure that porches are required and orient towards common open space(s) and are wide enough to be useful (seven feet wide or more is preferred).

- Create design standards for both common open spaces and semi-private open spaces for individual cottages. Common open spaces should be the focal point of a development with at least half of the cottages in a cluster directly facing the space.

- Require areas for shared use. Ex) lawn areas should be paired with an adjacent hard surfaced patio area. A shared community building could provide a space for gathering and sharing tools.

- Provided shared parking areas off to the side or rear of the development. Attached storage garages are limited to a single vehicle in size and shall be designed to minimize visual and functional impacts on the common open space.

Duplexes, Triplexes and Fourplexes

Duplexes are broadly defined as a building that includes two dwelling units. They can be side by side, stacked, or a combination of the two. They are an efficient form of housing often integrated into pre-war residential neighborhoods. Triplexes and fourplexes are similar with three or four units.

Policies

- Create design guidance to help multi-unit housing fit into existing neighborhoods. Key design issues include:
  - Emphasize that unit entries and windows are directed towards the street.
  - Locate driveways and garages to the side of the construction if possible.
  - Encourage articulated facades/rooflines to promote neighborhood compatibility.
  - Ensure usable private open space.

- Allow duplexes on corner lots in single-family zones when they are designed to look more like single-family homes.

- Create separate minimum setbacks for private garages to reduce their visual impacts and provide enough off-street parking without obstructing sidewalks.

- Consider removing single-family zoning and renaming it low-density residential.
Townhouses

Townhouses are dwelling units that share walls with other residential units, but have their own front stoop or porch, yard or balcony, and are usually owner-occupied. Townhouse buildings typically contain between three to six units. Most units feature their own private garage, located underneath the dwelling unit. Most modern townhouses feature two bedrooms, though many integrate three or four bedrooms.

Policies

- Remove lot size minimums to allow flexibility in the size and design of townhouses, or if lot size standards are used, they should be sized to allow typical two-bedroom units, which typically have a footprint of around 500 square feet. Typical townhouse lots range from 14 feet for a unit with a single car-width garage to 30 feet for larger townhouses.
- Exempt townhouses from internal side yard setbacks.
- Create design standards to ensure that townhouses fit into the existing or desired neighborhood context. Key design issues include:
  - Location and design of driveways and garages in relation to the sidewalk and pedestrian environment
  - Location and design of private internal roads
  - Location and design of unit entries
  - Articulated facades/rooflines
  - Provisions for usable open space
  - Fire department access and service vehicle circulation

Courtyard Apartments

Courtyard apartments are small multifamily buildings surrounding a courtyard that opens onto a street. Courtyard apartments are typically up to three stories and consist of multiple side-by-side and/or stacked dwelling units accessed from a courtyard or series of courtyards. The courtyards provide space for social connections among residents.

Policies

- Consider as an option in higher-intensity single-family zones or low-intensity multifamily zones where standard apartment complexes may be less acceptable to the community.
- Create design standards to ensure that courtyard apartments fit into the existing or desired neighborhood context. Key design issues include:
  - Courtyard size and design standards
  - Location and design of unit entries (oriented towards courtyard)
  - Location and design of parking areas
  - Articulated facades/rooflines (to promote neighborhood compatibility)
**Micro-housing**

Micro-housing is a very small dwelling unit. Sightline Institute describes them as the modern-day equivalents of rooming houses, boarding houses, dormitories and single-room occupancy (SRO) hotels, and they come in two main forms:

1. Congregate housing “sleeping rooms” are often in the 140-200 square-foot range and may include private bathrooms and kitchenettes. Shared facilities include kitchens, gathering areas and other common amenities for residents.

2. A small efficiency dwelling unit (SEDU) is a very small studio apartment including a complete kitchen and bathroom.

These very small units provide a relatively affordable unsubsidized option for renters.

**Policies**

- Create design standards to enhance site and building design and promote neighborhood compatibility.
- Require open space standards.
- Reduce parking requirements to reflect unit size and tenant mix.
- Review zoning standards to increase maximum density limits.
- Update building and zoning codes for minimum apartment size requirements.

**Increase or Remove Density Limits**

Regulating the maximum number of units per acre is one of the most commonly used tools to regulate the intensity of residential development in Washington jurisdictions. However, there are two notable drawbacks to the units/acre regulating approach beyond simply limiting density:

3. They penalize smaller units by design, as each dwelling unit, whether it is 500 square feet or 5,000 square feet, counts as one dwelling unit. As such the standard can shift development towards larger, more expensive units.

4. Most residents have a difficult time understanding what density looks like. When quizzed on the subject, community members often convey that the design of the streetscape, front yards and building frontages matter more to them.

Removing or relaxing such density limits are ways to increase the supply, diversity and affordability of housing.

**Policies**

- Communicate the need for such change, such as information from the housing needs assessment.
• Communicate the benefits of the strategy and link to community goals and policies.
• Illustrate case studies and example development scenarios to show how proposed changes would work on a key site.
• Couple with other tools to mitigate negative impacts and enhance the design of development. Effectively communicate those tools to community participants. Notable examples:
  • Form-based code or design standards and/or guidelines
  • Height limit, setbacks and minimum open space standards
  • Floor area ratio caps
  • Streetscape improvements (most notably planting strips with street trees)
  • Consider and clarify community infrastructure and service implications.

Revise ADU Standards
Accessory dwelling units (ADUs) are small dwelling units that are either attached to the primary dwelling or in a detached structure that is typically placed to the side or rear of the primary dwelling. ADUs have long been an important option for communities to add variety and housing choice in single-family neighborhoods.

ADUs can provide low-cost housing in established neighborhoods. They provide dwelling opportunities for extended family members and small households that prefer a neighborhood setting over apartment living.

Typical ADU ordinances require that such units be placed within or to the rear of a home. This configuration minimizes visual impacts of such units on the streetscape

Policies
• Collaborate with homeowners and prospective ADU developers and renters to help design ADU provisions that balance housing needs while minimizing neighborhood impacts.
• Consider allowing an ADU on any lot regardless of lot size.
• Consider offering pre-designed plans to encourage more ADU development.
• Consider allowing modular units and tiny homes (small dwelling units on a foundation with between 150-
• 400 square feet of habitable floor area) as ADUs.
• Consider allowing the conversion of garages to ADUs.

Offer Density and/or Height Incentives for Desired Unit Types
In communities with a deficit of small affordable units and areas where height and/or density bonuses are under consideration, such bonuses to allow for buildings
integrating a certain percentage of small units (under a specific size, such as 600 square feet) may be a good option. Alternatively, communities could adjust the way that density is measured to allow for discounts for very small units (i.e., density unit equivalent). On the other hand, many urban communities have a shortage of larger multi-bedroom apartment units to serve families with children. Density bonuses could be used to incentivize developments with such units.

**Policies**

- Small affordable unit incentives will be effective only where market analysis shows a gap in smaller studio and one-bedroom units.
- Consider reducing parking requirements if impacts to the neighborhood from on-street parking demand can be avoided or mitigated.
- Compatibility due to increased density or height may need to be addressed through other provisions.
- Consider the need to meet affordability thresholds when crafting the incentives and requirements for larger multi-bedroom units.

**Reduce Off-Street Parking Requirements**

Parking facilities add substantial cost in the development of new housing, whether it’s surface or structured parking. In suburban and small city settings, such parking facilities are more important but should be balanced with aesthetics and the impact on the yield of land.

**Policies**

- Consider parking maximum standards in downtowns, neighborhood commercial districts and commercial corridors with good existing or planned transit service.
- Consider reducing or eliminating parking requirements in areas where non-conforming on street parking exists, especially for change of use and redevelopment, to ensure historic and compact downtown character can be retained.
- Consider reducing requirements in areas planned for redevelopment and affordable housing.
- Consider adding additional parking tools, such as contracting with car-share providers, providing transit passes to residents, shared use parking, and off-site parking.
- Allow developers to reduce parking stalls if the city accepts a parking study by a certified transportation planner or engineer that demonstrates minimum impacts to surroundings.
- Encourage housing and parking to be rented separately.
Relax Ground Floor Retail Requirements
While a mix of uses can be useful for neighborhoods, especially along main streets, many municipalities require retail uses on the ground floors of all new multifamily residential projects. This may oversupply the local retail and office market, reducing the financial feasibility of projects with space that is less profitable to developers. Strategically applying ground-floor retail requirements to essential streets or blocks can limit the barrier to housing development.

Policies
- Limit ground floor commercial standards to those block-fronts that reinforce existing storefront patterns or to the minimum area necessary to achieve the community’s specific storefront use and design goals. Also limit to where current/anticipated market conditions can support the subject commercial floor area.
- Review what types of commercial uses are allowed and consider allowing live/work units to qualify as a ground floor commercial use on certain block-fronts.
- Consider allowing or clarifying allowance for residential lobbies that serve upper levels.
- Where there’s a desire to retain commercial uses along block-fronts, but the lots are deep, consider applying the ground level commercial use requirement only to the front 30-60 feet of the block-front. This allows greater flexibility to integrate residential development on such properties.
- While retail space demands may be declining, there’s often a strong desire to encourage a mixture of restaurants, personal and general service uses, and other non-residential uses such as salons, restaurants and coffee shops, professional studios, pet day care businesses, yoga and martial arts studios, and entrepreneurial start-ups. Consider offering height or density bonuses in exchange for providing ground level space for non-residential uses.
- Apply design standards for ground level residential uses facing the street in commercial and mixed-use districts to enhance the streetscape environment and provide for the privacy, comfort, and livability of the adjacent residential units.
- Allow for the accommodation of live-work units into projects, where private residential space above is combined with space for limited office/personal service uses such as home occupations on the ground floor. These spaces can present opportunities for commercial activity and allow for future changes to street-level retail with proper designs.
Reduce Setbacks, Lot Coverage and/or Impervious Area Standards
Modest reductions in front setback standards can help to expand possible building footprint area. In storefront and other dense urban environments, the opportunity to build a firewall up to the side property line allows greater flexibility and expansion of the possible building envelope.

Policies
- Allow porches and covered entries to project into front setbacks to encourage their integration and maximize building envelope opportunities.
- Consider design standards to enhance the streetscape and provide for the privacy, comfort and livability of the adjacent residential units.
- Consider separate minimum setbacks for private garages to reduce their visual prominence on the building and to provide enough space for cars to park in driveways without obstructing pedestrians on the sidewalk. For example, the minimum setback for garages should be at least 20 feet.

Use a Form-Based Approach
A form-based approach to regulating development emphasizes predictable built results and a high-quality public realm by using physical form and design rather than separation of uses and density limits. This approach uses prescriptive standards for building massing, layout, orientation and design to help achieve a community’s specific vision. It places a big emphasis on the design of streetscapes and how private development looks from the street.

Form-based codes (FBCs) were created in response to regulations that placed more of a concern with controlling land use than shaping the physical form of communities. Whereas a strict form-based code has little or no land use restrictions, many zoning codes for urban Washington communities now function as a hybrid of strict FBC and traditional zoning code by integrating stronger form-based design regulations with use-based regulations. FBCs can help add housing by letting the market determine how many units of what size are feasible.

Policies
- First determine the desired physical form your community wants to achieve. Second, explore “workable” regulatory tools that can best help achieve that form given the community’s physical, planning, political, and regulatory environment, whether it might be a strict form-based code, or a hybrid form that adjusts current zoning provisions and integrates form-based design standards.
- Factors in creating a “workable” form-based approach:
- Consider the community’s resources available to convert to a form-based code due to complexity and expense.
• Make sure that code provisions are economically feasible given local market conditions.

• Consider creating a system of development frontage standards that apply to particular street types. For example, while a community’s main street may have strict storefront and parking location standards, side streets might offer more flexibility in ground level uses, design and parking lot location.

**PUD/PRD and Cluster Subdivisions**

PUDs and PRDs stand for "planned unit development" and "planned residential development," respectively. The terms generally refer to large integrated developments that offer special design, use/housing type mix and development intensity flexibility, provided they conform to the comprehensive plan. Specifically, PUDs and PRDs typically offer flexibility in lot sizes and housing types provided the overall development meets the density provisions of the zone. Some PUDs and PRDs offer density bonuses for achieving specific goals or integrating community amenity features. PUDs and PRDs often also allow flexibility in the design of street and other public improvements, provided they meet specific criteria. Thus, PUDs and PRDs can be a good tool to integrate a greater mix of lot and housing types to meet community demographic needs while providing environmental benefits of clustering housing to help preserve sensitive natural areas and/or provide a greater amount of usable community open space.

Some communities are increasingly allowing the clustering and lot size averaging benefits of PUDs and PRDs through standard zoning and subdivision provisions. Clustering usually includes the grouping of lots together on smaller-than-normal parcels to provide opportunity to preserve open spaces, critical areas or unique landforms that otherwise would not likely be preserved. Lot size averaging allows developers to subdivide land into a variety of lot sizes, provided the average lot size in the development meets the minimum, often allowing for more efficient use of land and potential for additional housing units. These tools also provide for more compact roadway arrangements, expanded common open space and allow the possibility for different size home choices. This arrangement within the standard subdivision process can create more predictability for the applicant by simplifying the development review process and eliminating or minimizing the possibility of costly conditions of approval.

**Policies**

• Allow cluster subdivision design in the standard subdivision process, without the need to go through additional review procedures typical of PRD or PUDs.

• Consider compatibility standards to avoid major differences in lot sizes compared to existing development.

• Consider density or other incentives to increase the diversity and affordability of lot and housing types in cluster subdivisions.
Manufactured Home and Tiny House Communities
Some cities are starting to adopt local codes to allow tiny houses as an affordable housing option that is in line with community desires for sustainability, limited visual impact, and preservation of open space.

Policies
- Consider allowing different options for tiny house integration, including:
  - Tiny houses as detached accessory dwelling units.
  - Tiny house clusters or villages – designed in a manner similar to cottage housing clusters.
  - Tiny house density/massing and review process:
  - Consider allowing a higher number of these units than typical units for the zone, due to the small size of tiny houses. Some density increase is essential because the units are smaller and usually more expensive to build on a cost-per-square-foot basis.
  - Consider applying a maximum floor area ratio limit or an across-the-board allowed density for tiny houses, such as one tiny house per 1,200-square-foot lot area.
  - Tiny house design elements: Provide design standards in a manner similar to cottage housing clusters:
  - Consider providing design standards for both common open spaces and semi-private open spaces for individual units.
  - Permit construction of a shared community building to provide a space for gathering and sharing tools.
  - Consider how parking can be integrated with tiny house clusters.

Strategic Infrastructure Investments
One of the costs associated with development is the cost of upgrading existing or developing new infrastructure to serve development. In some cases, a community may wish to identify priorities for investment in sewer or water extensions or sidewalks to support upzones, or to catalyze development around new amenities such as transit hubs or community centers. Strategic selection of infrastructure priorities in the capital facilities element can help support your housing program.

In Washington state, the community revitalization financing (CRF) program authorizes cities, towns, counties and port districts to create a tax “increment area” and finance public improvements within the area by using increased revenues from local property taxes generated within the area (RCW 39.89). The best locations for such a program are undeveloped and underdeveloped areas because this program depends on an increase in property value. In 2020, HB 2497 amended this program to add permanently affordable housing to the list of public improvements that could use program funds. Here, “permanently affordable housing” is defined as 40 years for rental housing and 25 for ownership housing.

Spokane's Tax Increment Finance District

Process Improvements
Strategies included in this section provide for a smoother, faster and/or more predictable permitting process for developers seeking to build housing that is consistent with jurisdictional goals. By streamlining the review process, jurisdictions can reduce the level of uncertainty and risk for potential developers. This can make it easier to get project financing on favorable terms and reduce construction costs due to delays.

SEPA Infill Exemption
A city planning under the GMA can establish categorical exemptions for development to "fill in" urban growth areas. RCW 43.21C.229 allows a city or county planning under GMA to adopt an infill exemption if the comprehensive plan was already subject to environmental analysis through an environmental impact statement (EIS). Any residential, mixed-use or smaller scale commercial development that is roughly equal to or lower than the density goals of the comprehensive plan is exempt from further review. The local government must consider the specific probable adverse environmental impacts of the proposed action and determine that these specific impacts are adequately addressed by the development regulations or other applicable requirements of the comprehensive plan; subarea plan element of the comprehensive plan; planned action ordinance; or other local, state or federal rules or laws. By removing an extra layer of review and potential risk, a SEPA infill exemption can encourage development within the designated area.

Policies
- Consider doing infill exemption in association with SEPA analysis on a comprehensive plan update.

Planned Action
Planned actions are authorized under SEPA (RCW 43.21C.440 and WAC 197-11-164 through -172) and provide more detailed environmental analysis during an area-wide planning phase, rather than during the permit review process. A community planning under GMA can develop a planned action EIS or threshold determination to facilitate development consistent with local plans and mitigation measures (see more under “When and Where Applicable”).
As a result, future projects in the designated planned action area do not require SEPA determinations at the time of permit application if they are consistent with the type of development, growth and traffic assumptions, and mitigation measures studied in the EIS or threshold determination. Such projects are still required to comply with adopted laws and regulations and undergo review pursuant to the community’s adopted land use and building permit procedures; however, the advanced work streamlines the development review approval process and removes a potential layer of appeal.

Policies

- Integrate the GMA and SEPA public engagement processes. Work with the community, as well as non-profit and for-profit housing and mixed-use developers, to ensure an inspired and realistic plan.

- Consider having the planned action focus on opportunity sites that are publicly and privately owned.

- Determine where surplus public lands and master planning can jump start housing and mixed-use development in an area with limited housing at desired densities.

- Combine a planned action with well-defined vision, infrastructure investments and code incentives for greater effect.

Protection from SEPA Appeals on Transportation Impacts

RCW 43.21C.500 provides an option to protect SEPA decisions from appeal for impacts to transportation elements of the environment when the approved residential, multifamily or mixed-use project in a GMA city or town is:

1. Consistent with the locally adopted transportation plan or transportation element of the comprehensive plan, and

2. Subject to locally adopted impact fees and/or traffic and parking impacts are expressly mitigated under another ordinance, and

3. If Washington State Department of Transportation (WSDOT) determines the project would not present significant adverse impacts to the state-owned transportation system.

This provision is intended to encourage development within central infill areas because it is less likely to impact the state system. This is an optional process where the local SEPA responsible official or developer may consult with WSDOT Regional Development Services offices to obtain a letter of no significant adverse impact to “transportation elements of the environment,” which include
impacts to transportation systems; vehicular traffic; waterborne, rail, and air traffic; parking; movement or circulation of people or goods; and traffic hazards.

Policies

- Ensure goals and policies of transportation element or transportation master plan are up to date and clear.
- Ensure the impact fee procedures and rate studies are up to date, and levels of service for traffic and standards for parking are clear to best support the decision that impacts are mitigated.
- Contact the WSDOT development services office to clarify the local process and understand review times.

Permitting Process Streamlining

Providing an efficient, predictable and user-friendly permitting process can encourage new housing construction by reducing potential confusion or perception of risk among developers as well as lowering their administrative carrying costs. There are several ways in which jurisdictions can improve the clarity, speed and consistency of the permit review process, consistent with legal requirements:

- Provide clear and informative application materials.
- Simplify procedures for projects with lower impacts.
- Provide for pre-application meetings.
- Provide online application submittal and tracking mechanisms.
- Provide the option for expedited review for an added fee.
- Expedite review for certain types of development that the community wishes to encourage, such as infill development or affordable housing.
- Identify permit liaisons or permit teams to support “one window” access for applicants.
- Increase department staffing during busy cycles.
- Provide public reports on actual permit review times.
- Ensure permit and building department staff are updated on policy development and diverse housing options within the jurisdiction.

Policies

- Review processes for opportunities to streamline
- Use adaptive management to continually approve permit procedure
- Track timeliness of permits over time
Subdivision Process Streamlining
Several recent changes to the subdivision statute were intended to make housing development easier and faster.

Short Plats:
Short subdivisions, also called “short plats,” are defined in RCW 58.17.020(6). "Short subdivision" is the division or redivision of land into four or fewer lots, tracts, parcels, sites or divisions for the purpose of sale, lease or transfer of ownership. Cities, towns and GMA counties may increase the number of lots to a maximum of nine within urban growth areas. This means that these developments may be administratively approved instead of needing to go through a more lengthy subdivision process.

Subdivisions:
RCW 58.17.095 provides that a county, city or town may adopt an ordinance providing for the administrative review of a preliminary plat without a public hearing. The ordinance may specify a threshold number of lots in a subdivision above which a public hearing must be held, and may specify other factors which necessitate the holding of a public hearing. If the public hearing is waived, the planning commission or planning agency shall complete the review of the proposed preliminary plat and transmit its recommendation to the legislative body as provided in RCW 58.17.100 to approve or disapprove the preliminary plat. RCW 58.17.100 was amended to allow local governments to delegate authority to approve the final plat to the planning commission or to staff. This means that a final plat does not have to wait as long to get final approval, which reduces the cost of the development.

Policies
- Consider related regulations and how changes to short plat limits or streamlining the approval process for subdivisions can mutually advance other goals for diverse housing, such as with cottage housing, small lot development, and zero lot line development.

Affordable Housing Incentives

Affordable housing incentives encourage and support multifamily housing development, particularly income-restricted affordable housing. In a typical market, affordable housing is typically built by two different kinds of developers:
Mission-driven affordable housing developers are largely public, not-for-profit organizations that assemble public and private funding to finance affordable housing projects. While these developers usually do not work to maximize profits, they still seek projects that allow them to sustain their operations and deliver affordable housing in an efficient way. For these developers, incentives reduce total costs and can increase the units they can provide.

Affordable housing can also be built by for-profit developers, including market-rate housing developers. These businesses use incentives to improve overall returns through density bonuses, parking reductions, fee waivers or other allowances in exchange for affordable units in the development. Although they can be motivated by corporate social responsibility, for-profit companies typically work to receive returns from projects and have limited options with respect to providing income-restricted affordable units unless they are mandatory (i.e., inclusionary zoning) or they are offered significant incentives for voluntary participation.

Development incentives work differently in the private market with respect to the financial feasibility of projects depending on the market. There are three cases that a community may face with tailoring incentives to local markets:

At the low end of the spectrum, a desired project type is infeasible because the costs of land, construction and financing are too high and market rents are too low to provide enough of a return to investors. If the net revenue received from a project is too low given an investment, affordable housing incentives are generally unlikely to make enough of a difference to project returns. In these cases, cities should focus on incentives for market rate housing production (such as MFTE with no affordability requirements) and support for nonprofits to help them provide affordable housing.

In a marginal market, the expected financial returns are near the threshold of feasibility, and there may be some uncertainty about whether the desired project type would be profitable enough to move forward. In these cases, incentives are best deployed to “move the needle” and make a project more feasible by reducing costs or increasing potential returns. Here voluntary programs may have the most leverage to encourage new housing projects.

On the high end of this spectrum are hot housing markets where projects are expected to provide an adequate return to investors without any incentives due to higher market rents. Cities experiencing these conditions may explore whether mandatory requirement for affordable housing (such as inclusionary zoning), paired with incentives, can encourage affordable housing production without significantly reducing market-rate housing production.
Note that feasibility can vary by project type. For example, a 2019 study of market condition in the South Hill urban corridor in unincorporated Pierce County found that low-rise multifamily is likely to be feasible while midrise is not. In this case, a density bonus would not provide a strong incentive to provide affordable housing. So, understanding what types of projects are most likely to be feasible can help tailor incentives to be most effective.

**Multifamily Tax Exemption**

A multifamily tax exemption (MFTE) is a waiver of property taxes to encourage affordable housing production and redevelopment in "residential targeted areas" designated by cities. The goal of MFTE programs is to address a financial feasibility gap for desired development types in the target areas, specifically to develop sufficient available, desirable and convenient residential housing to meet the needs of the public. The urban centers that are the typical targets for this tax exemption policy are often near transit, jobs and amenities, and MFTE programs are designed to encourage denser growth in areas with the greatest capacity and significant challenges to development feasibility.

RCW 84.14 allows certain cities planning under the GMA to grant qualified residential and mixed-use projects a property tax exemption under an MFTE program for the value of new residential improvements, rehabilitation, or conversion of residential buildings in the designated areas. This can currently take two forms:

- An eight-year tax exemption can be offered for multifamily projects which meet base requirements.
- A 12-year exemption is allowed for projects that incorporate a minimum percentage (typically 20%) of income-restricted units.

Cities can also limit MFTEs specifically to projects that incorporate only income-restricted units.

**Gaps Addressed**

- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very low-income housing
- Housing near transit, amenities and/or jobs

**When and Where Applicable**

Available to cities with 15,000 or higher population, or others as determined by RCW 84.14.
• Eight-year MFTE programs with no affordability requirements are most effective and appropriate in cities having trouble attracting private developers to build multifamily housing anywhere within their borders.
• Cities with strong housing markets that are already seeing multifamily development may consider offering only a 12-year option to encourage the inclusion of income-restricted affordable housing development. When both options are available, profit-motivated developers will typically select the eight-year option.
• MFTE “residential target areas” should be selected in conjunction with designated urban centers that lack residential housing options, including affordable housing.21
• Recommended in areas of high demand, such as along transit corridors and near amenity clusters or job centers.

Potential Drawbacks
• Loss of property tax revenue through the eight- or 12-year term of exemption on the value of residential improvements.
• If the incentive is offered to projects that would otherwise already be feasible, this policy may have little practical benefit. A 2019 report showed that in the majority of areas, rents for "affordable units" were higher than market rents.22
• Affordability covenants expire after 12 years and cannot be renewed, which means that affordable MFTE units are not part of the long-term affordable housing supply.

Policies
• Carefully map target zones for implementation to meet local goals.
• Conduct pro forma analyses of sample projects to estimate a developer’s expected return on investment under different scenarios. This can be helpful to calibrate requirements such as the amount of affordable units and affordability levels to maximize the benefits without discouraging use of the incentive by developers. Some local governments require this analysis as part of the application.
• Affordability levels are set within statute but may be adjusted to meet local circumstances. Review market rents to ensure that affordability levels provided by the exemption are reduced rents compared to market rents.
• Layering MFTE with other incentives for affordable housing, such as density bonuses, fee reductions or planned actions, can magnify the overall effects.

Time/Capacity/Skill Needed
In-house staff can perform policy design and implementation. Annual monitoring of affordability of the designated units will be needed (RCW 84. 14.100).

Resources
• Affordable Housing - MRSC (see Multifamily Tax Exemption section)
- Housing Market Policy Dashboard - City of Tacoma - Allows users to explore the potential outcomes of housing policy scenarios (including MFTE and inclusionary zoning) on the feasibility of development and projected affordable housing development.
- Bellingham code 17.82.030: Eight-year exemptions are available for projects in residential target areas and 12-year exemptions for projects incorporating 20% or more income-restricted affordable housing units.
- Vancouver code 03.22: Target areas include the downtown core and a buffer surrounding their BRT service route. An eight-year exemption is offered for all projects of four+ units, and a 12-year exemption for projects incorporating 20% of income-restricted units for residents at 60% area median income (AMI).

**Alternative Development Standards for Affordable Housing**
Jurisdictions can relax development regulations in return for affordable housing development as an incentive. One common strategy is to reduce minimum parking requirements for projects that include affordable housing. This is often implemented by reducing or eliminating the required number of parking stalls per unit only for the income-restricted affordable units in a new development. Other alternative development standards that are commonly used to encourage affordable housing are Reducing Minimum Lot Sizes, Increasing Building Height, Offering Density and/or Height Incentives for Desired Unit Types, and Reducing Setbacks, Lot Coverage and/or Impervious Area Standards. In return for flexibility in development standards, RCW 36.70A.540, Affordable Housing Incentive Programs, requires affordability for at least 50 years.

**Gaps Addressed**
- Housing diversity
- Affordable homeownership
- Middle-income rental housing
- Very-low income housing

**When and Where Applicable**
- Parking minimums will be most effective/applicable for multifamily housing, especially where expensive structure parking would otherwise be needed.
- Minimum lot size reductions are most meaningful in older residential areas where the original platted lot size is smaller than the zoning district’s minimum lot size or in residential zones with undeveloped tracts that could be subdivided.

**Potential Drawbacks**
See relevant housing strategies for details.
Policies

- These often work most effectively as part of a broader package of incentives to encourage affordable housing production.
- Where flexibility is allowed by code, ensure flexibility for affordability is clear.

Time/Capacity/Skill Needed
See relevant housing strategies for details. Annual monitoring of affordability of the designated units will be needed.

RCW 36.70A.540: Affordable Housing Incentive Programs

Pierce County offers several alternative design standards in its Affordable Housing Incentives. See Pierce County Affordable Housing Incentives: Independent Evaluation and Recommendations to Increase Effectiveness (BERK Consulting, 2019).

Fee Waivers for Affordable Housing
Fee waivers reduce the up-front cost of construction for residential development. Fees, such as impact fees, utility connection fees and project review fees, can run in the thousands per unit for residential properties in some jurisdictions. Waiving some, or all, of these fees for income-restricted units can be a valuable incentive for encouraging the creation of income-restricted affordable units. This incentive is most effective when paired with a larger incentive package for affordable housing.

Gaps Addressed
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

When and Where Applicable
All residential and mixed use areas

Useful to promote integration of affordable housing units within market rate developments

Potential Drawbacks
- Loss of revenue for public amenities such as parks, schools and infrastructure improvements
- For impact fees, municipalities may need to backfill a portion of payments for waived fees (RCW 82.02.060(3))

Policies
- Offer this incentive along with a suite of financial and/or regulatory incentives to promote income-restricted affordable housing.
• Ensure that the length of time units are required to remain affordable and the income brackets to whom they must cater are in parity with the benefits received for the community and authorizing statute.

**Time/Capacity/Skill Needed**
Planning department staff can implement regulatory benefit and annual monitoring of affordability of the designated units. Coordination with other city departments on fee waivers will be needed.

**Resources**
Affordable Housing - MRSC (See "Waiver of Fees or Standards" Section)

RCW 82.02.060(3) authorizes cities, counties and towns to grant impact fee exemptions for affordable housing. Jurisdictions may choose a partial exemption of not more than 80% of impact fees, in which case there is no explicit requirement to pay the exempted portion of the fee from public funds other than impact fee accounts; or provide a full waiver, in which case the remaining percentage of the exempted fee must be paid from public funds other than impact fee accounts.

A city or town may waive or delay collection of tap-in charges, connection fees or hookup fees for low-income persons connecting to water, sanitary or storm sewer service, electricity, gas and other means of power and heat (RCW 35.92.380 (1980), RCW 35.92.020(5)).

RCW 36.70A.540 authorizes affordable housing incentive programs including fee waivers or exemptions.

Pierce County Code 18A.65: Fee waivers are offered for building fees, traffic impact fees, school impact fees, park impact fees, sanitary sewer system/facilities charge and preliminary plat application fees.

**Funding Options for Affordable Housing Development**
This section identifies options available to communities for directly funding or subsidizing affordable housing production. These include grants, loans and options for new revenue generation.

**Local Option Taxes, Fees and Levies** - Cities may provide direct project funding, through grants or loans, to encourage the production of income-restricted affordable housing. Securing this funding can occur in different ways:

**A local housing tax levy**, authorized through RCW 84.52.105, can allow up to $0.50 per $1,000 of property tax to be allocated toward an affordable housing fund for projects serving very-low income households (50% median family income or less) if approved by a majority of the voters of the taxing district. Housing levy
funds may be used for a variety of purposes detailed in an affordable housing finance plan such as for matching funding for not-for-profit housing developments. This support can improve a project’s competitiveness for receiving additional financing from state or national sources. The county, city or town that imposes the levy must declare an emergency with respect to the availability of housing that is affordable to very low-income households in the district. SB 6212 (laws of 2020) expands the use of this tax to include affordable homeownership, owner-occupied home repair and foreclosure prevention programs for low-income households up to 80% of median family income as of October 1, 2020.

**Sales and use tax:** With voter approval, counties can pass a sales and use tax of up to 0.1% to fund affordable housing programs serving households with incomes below 60% of the AMI and within specific categories. These categories include individuals with mental illness, veterans, senior citizens, homeless families with children, unaccompanied homeless youth, persons with disabilities, or domestic violence victims (RCW 82.14.530).

**Real Estate Excise Tax (REET 2):** A city or town planning under GMA can impose an additional 0.25% real estate excise tax ("REET 2") under RCW 82.46.035. This requires voter approval only for communities voluntarily planning under GMA. Revenues may be used only for financing “capital projects” in the capital facilities plan element of the comprehensive plan, which may include building, rehabilitatting/repairing and/or purchasing affordable housing.

**Other funds:** See MRSC’s Revenue Guide for Washington Cities and Towns for updated information.

**Gaps Addressed**
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

**When and Where Applicable**
This strategy is best suited for communities that face a shortage of very low income-restricted affordable housing whose community would support such a tax, fee or ballot measure (if required).

In the case of REET 2, this is most effective in communities that are seeing active markets and significant real estate sales.

**Potential Drawbacks**
- A housing levy must be approved by the voters and may be assessed for only 10 years.
- There is a financial cost to local residents subject to the property tax levy, or to new homeowners with REET 2.
• REET 2 funding is restricted to projects in the capital facilities plan.
• A sales and use tax must be approved by the voters. No more than 10% of the revenue may be used to supplant existing local funds. If a county imposes this tax after a city located within that county has imposed this tax, the county must provide a credit against its tax for the full amount imposed by the city.

Policies
• Coordinate city funding with other known funding sources for maximum impact.
• Work with area groups to develop information about ballot initiatives, demonstrating the types of housing needs in the community.

Time/Capacity/Skill Needed
Staff time to create and administer program, including development of an affordable housing financing plan or amendments to the Capital Facilities Plan to direct the expenditure of funds.

Resources
• Affordable Housing - MRSC (See "Affordable Housing Property Tax Levy" Section)
• Affordable Housing - MRSC (See "Affordable Housing Sales Tax" Section)
• Real Estate Excise Tax - MRSC
• Example legislation from Bellingham and program description in Vancouver
• Sample real estate tax ordinance from San Juan County

Local Housing Trust Fund
Housing trust funds are distinct funds established by local governments that receive an ongoing source of dedicated funding to support housing affordability. They can be designed to meet the most critical housing needs in each community.

Gaps Addressed
• Increase housing supply
• Affordable homeownership
• Middle-income rental housing
• Senior housing
• Very-low income housing

When and Where Applicable
Communities with sufficient capacity to manage a housing trust fund and generate sufficient capital for desired outcomes. Can also be coordinated at the county and regional level.
Potential Drawbacks
Requires management of the fund.

Policies
- Leverage additional funding from state or national programs (e.g., Community Development Block Grants) to maximize the benefit of dollars raised.

Time/Capacity/Skill Needed
Staff time to report on the distribution and use of funds.

- Bellingham Home Fund

"Found Land": Surplus Land and Other Opportunities
In areas with high land costs, acquiring suitable land can add significant expense to an affordable housing project. Cities or counties may own surplus or underutilized lands that may be suitable for housing development. These public lands can be donated or leased to affordable housing developers to reduce the cost of development and help make a project more financially feasible. Other land might hold potential, too:

Surplus publicly owned land: Under RCW 39.33.015 (2018), public agencies (local governments or utilities) can discount or gift land they own for “public benefit,” defined as affordable housing (up to 80% AMI). These agencies must adopt rules to regulate the transfer of property. Staff should inventory publicly owned available lands that may meet criteria for donation and assess environmental or other constraints that may inhibit project suitability prior to site selection. Consider the broad range of public agencies that may be willing to sell, trade, or donate land for a public purpose. Consider lands purchased as staging areas for major construction that may be turned toward housing at the end of the project.

Brownfields: Certain properties that can safely be rehabilitated (if necessary) may be eligible for Environmental Protection Agency (EPA) brownfield redevelopment grants. This can be a strategic move to both satisfy goals for infill development and provide additional affordable units in a community. The 2018 Washington State Legislature authorized a competitive process to fund recipients that use their cleaned-up property to build affordable housing and provided funds to the Department of Ecology to distribute to local governments to investigate and plan cleanup for potential affordable housing development. The health and safety of
residents should be a top priority in site selection, and only parcels where remediation can ensure safe residential use should be selected.

**Adaptive reuse** is the process of reusing an existing building for a purpose other than what it was designed for. After buildings become disused or abandoned, adaptive reuse can be an effective way to put new uses into existing buildings, reusing existing infrastructure and preserving historic assets. Historic preservation tax credits provide a 20% federal income tax on the qualified amount of private investment on certified rehabilitation of a National Register listed historic building.

**Service groups and churches:** In most communities, service groups or churches may be considering divestment of property as their membership changes. These groups may be willing to provide property for a benevolent use.

**School district-owned land** can be leased for affordable housing. HB 2617 (laws of 2020) was passed to remove recapture provisions when used for affordable housing under RCW 39.33.015. This facilitated affordable housing development on Everett School District property, which leased a ballfield for an affordable housing complex.

**Co-location: building housing with other community facilities:** Another way to “find land” is by adding housing above community facilities such as daycares, libraries, recreation or community centers, or on the same property. This strategy takes advantage of land and utilities already planned for the main use. Planners should ensure zoning allows for such mixed uses, along with adequate height.

**Vacant, abandoned and tax delinquent property:** These properties generally have negative impacts on surrounding properties while also preventing productive use of the land. Cities or agencies can help to assemble these properties and coordinate a sale to developers or non-profit organizations to develop affordable housing. This process of assembling is called land banking, and often includes resolving ownership issues and/or addressing tax liens or land encumbrances that otherwise deter developers from pursuing these properties. Like with surplus publicly owned land, MRSC notes that the state constitution generally restricts cities and counties from giving property to private individuals or from selling it for less than market value unless the property would be used to directly benefit the “poor and infirm.”

**Gaps Addressed**
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing
When and Where Applicable
Best suited for communities that face a shortage of income-restricted affordable housing and that own surplus land in desirable locations.

Potential Drawbacks
- Loss of public land ownership on a long-term or permanent basis
- Opportunity cost of other potential uses for public lands
- Be aware of any lands that might have use restrictions based on their funding source at the time of purchase, or any covenants on the land

Policies
- Establish a transparent procedure for selecting eligible sites.
- Determine if any community benefits, in addition to income-restricted housing units, should be required on the site.

Time/Capacity/Skill Needed
Staff resources may be used to inventory and assess public lands.

Resources
- Public Land for Affordable Housing - PRSC
- Use of Publicly Owned Property for Affordable Housing - Local Housing Solutions
- Project examples from Bellevue: Hopelink Place, Habitat Eastmont, Brandenwood Apartments and Park Highlands at Wilburton

Partner with Local Housing Providers
Local governments may want to coordinate with local housing groups and non-profit developers to look for shared goals and identify ways both groups can work together. This may include identifying property, crafting incentives, developing housing assistance programs, supporting grant applications, code enforcement, property owner assistance or other programs to help increase affordability and reduce homelessness.

Gaps Addressed
- Increase housing supply
- Affordable homeownership
- Middle-income rental housing
- Senior housing
- Very-low income housing

When and Where Applicable
- Any town can work with its development community to craft custom solutions that address most urgent needs and leverage available resources. If assisting
with low-income housing tax credit (LIHTC) applications, it is important to remember distinctions between the 9% and 4% programs.

- The 9% program is administered through a competitive application process, with preference for projects targeting lower-income households.
- The 4% program is typically preferred for for-profit developers and often focuses on workforce housing. Although nominally it was not designed as a competitive process, limited availability of the associated bonds has meant that this process has become competitive as well.

Potential Drawbacks

- Jurisdictions have limited capacity. Forging partnerships and developing concepts that achieve shared goals can be a time-intensive process.
- Projects owned by private or non-profit developers may have affordability covenant expiration dates.

Policies

- Reach out broadly to identify local organizations, resources and housing needs of high-need groups, such as the disabled, elderly or homeless.
- The city can support applications, but tax credits are applicable for developers only.

Time/Capacity/Skill Needed

Work can be done in-house. Established relationships with the development community can help promote partnerships that lead to positive outcomes.

Funding Resources for Affordable Housing

There are a variety of sources of funding for affordable housing, and normally several forms of funding are required to make a project feasible. Below are some of the more prominent funding sources available.

Low-Income Housing Tax Credit (LIHTC) program. This program is a federal initiative that authorizes affordable housing developers to sell tax credits to investors to generate equity for development costs. Investors can use the credits to reduce their federal tax liability. In Washington, this program is administered through the Washington State Housing Finance Commission (WSHFC) for projects building units affordable at the 60% area median income (AMI) level for 30 years. Through LIHTC, there is a 9% tax credit program and 4% tax credit program. Nationally, the LIHTC program has helped to create over 3 million affordable housing units over 30 years, according to the National Multifamily Housing Council.

Washington State Housing Trust Fund. The Department of Commerce manages these funds that provide amortized loans, deferred loans and recoverable grants to
support projects that acquire, build and/or rehabilitate affordable housing. Units must be accessible to households earning up to 80% of the AMI, with federal HOME funding requiring affordability at 50% AMI. A covenant is typically secured to ensure that the required affordability of units is maintained for 40 years.

**HUD/FHA Loans.** These loan programs support affordable housing projects by allowing for more favorable lending terms than private-market providers will offer. The Section 221(d)(4) program insures construction loans for new construction or substantial rehabilitation of moderate- and low-income rental housing that contains five units or more. The Section 223(f) program insures mortgages for the purchase or refinance of existing multifamily housing.

**United States Department of Agriculture (USDA) Grant and Loan Programs.** The USDA offers a variety of programs aimed at increasing affordable multifamily rental housing in rural areas. These include: Housing Preservation and Revitalization Demonstration Loans and Grants, Housing Preservation Grants, Multifamily Housing Direct Loans and Multifamily Housing Loan Guarantees.

**Community Development Block Grants (CDBGs).** These grants are federal funds administered to smaller cities/towns and counties for projects that improve the economic, social and physical environment. CDBG funding cannot be used for new housing construction. It can, however, be used for housing rehabilitation, homeownership assistance, affordable housing plans and infrastructure projects that support affordable housing development. Specific CDBG grants are available to Native communities through the Indian Community Development Block Grant Program (ICDBG). ICDBG funds have added flexibility that allows for land acquisition to support new housing and, under some circumstances, new housing construction. Some communities get funding directly from HUD; Commerce administers funds for the balance of the state.

Appendix 5: Displacement Prevention Strategies

**What is Displacement?**

Displacement refers to instances where a household is forced or pressured to move from their home against their wishes. This can be for economic, cultural, or physical reasons, and the result can be catastrophic for households that are impacted. It can also disrupt the social fabric and networks of trust and support that exist within a community. For housing actions plans funded by Commerce, RCW 36.70.600 (2) requires local governments to consider strategies to minimize displacement of low-income residents resulting from redevelopment and strategies of the plan. The goal of housing action plans is to adapt housing strategies to ensure housing exists for all members of a community. This often requires housing opportunities to change, and so operating as though change will not occur is not feasible. So how can a community plan for change in a way that is minimally disruptive for those who live there, and in a way where displacement does not occur? This section will examine displacement, and strategies that can be used to prevent and/or mitigate it.

**Types of Displacement:**

**Physical Displacement**

Physical displacement typically occurs with an eviction or lease termination. Various circumstances can lead to physical displacement, including a property owner’s choice to demolish an existing residence to enable the construction of new buildings on the same site. Owners may also choose to rehabilitate an existing residence or building. For example, strong demand for housing can encourage property owners to upgrade or refurbish existing rental buildings with new finishes to increase rents and attract higher-income tenants. A third cause of physical displacement is the expiration of covenants on rent- or income-restricted housing. When covenants expire, the building owner can raise the rent for a unit, making it unaffordable to a low-income tenant.

When a city adopts strategies, such as an upzone, to encourage more intense housing development, it also increases the chances that current residents in the affected neighborhood will be physically displaced to make way for redevelopment. The areas may have low levels of investment, many renters, and be seen as “in need of redevelopment.” Residents in these neighborhoods generally have lower income, are renters and are more vulnerable to displacement than those in established stable neighborhoods that may not be considered for upzones. This can lead to exacerbating inequities that already exist.

**Economic Displacement**

Economic displacement occurs when pressures of increased housing costs compel a household to relocate. Market-rate housing costs are largely driven by the interaction of supply and demand in the regional housing market. Lower-income
households living in market-rate rental housing are at greater risk of economic displacement when housing costs increase. Even homeowners can be at risk of economic displacement when property tax bills increase significantly.

Vulnerability to economic displacement can disproportionately impact communities of color. Across Washington state, communities of color experience higher rates of housing cost burden when compared to white, non-Hispanic households. Cost burden is when a household is paying more than 30% of its income for housing and utilities.

**Cultural Displacement**

Cultural displacement occurs when people choose to move because their neighbors and culturally related businesses and institutions have left the area. The presence (or absence) of these cultural assets can influence racial or ethnic minority households in their decisions about where to live, more than for broader populations. The same segregation and discrimination challenges that may limit access to job and educational opportunities may also limit access to housing for these communities.

For example, if neighboring households or community serving businesses within a racial or ethnic community experience direct or economic displacement, other households within the same racial or ethnic community may face increased pressure to relocate due to cultural factors. Since cultural anchors, gathering spaces, arts organizations, businesses and religious institutions often are not widespread in alternative locations, the presence of these cultural assets often can have added importance to racial or ethnic minority households in their location decisions. Cultural displacement can be reasonably assumed to accelerate or amplify the impacts of other displacement pressures, specifically for racial and ethnic minority populations.

**Strategies to Address Physical Displacement**

**Strategic Acquisition and Financing of Existing Multi-family Housing**

To better retain affordable housing, cities and housing authorities can catalog naturally occurring affordable housing and housing with income restrictions or covenants that are about to expire. Some of this information could be found in the HNA or with further analysis of HNA data. Cities, counties, and housing authorities may then identify funds to acquire existing multifamily buildings that serve low- or moderate-income residents to avoid displacement of residents. Selected properties should be likely targets for redevelopment with residents otherwise unable to afford...
Support Third-Party Purchases of Existing Affordable Housing
Community-based organizations, non-profits and community land trusts can be important property owners within a neighborhood. Using public resources to empower trusted institutions can preserve or create affordable housing and space for community-serving organizations and businesses. Municipal and other funds can assist these institutions in land and property acquisition efforts that preserve affordable housing and prevent displacement within a neighborhood.

Notice of Intent to Sell/Sale Ordinance
A “notice of intent to sell” ordinance requires owners of multifamily buildings to provide official notification to tenants and local housing officials. This ordinance can apply specifically to properties with rents at or below certain income levels. The notice gives public authorities the opportunity to plan for a potential purchase in the interest of preserving housing that serves low- or moderate-income residents. It also acts as a mitigation measure for residents, providing additional time to prepare for a potential need to move.

A related strategy uses existing databases, such as the National Housing Preservation Database (NHPD) and PolicyMap to identify properties with expiring income-restricted covenants. These resources empower cities to proactively identify units for preservation as affordable to low-income households.

Foreclosure Intervention Counseling
Foreclosure intervention counselors serve as intermediaries between homeowners and financial institutions to advocate for at-risk homeowners in need of budgeting assistance, refinanced loan terms or repaired credit scores. Cities can use affordable housing funds to support these programs, or community land trusts can step in to purchase foreclosed property, helping to restore ownership for residents.

Mobile Home Park Conversion to Cooperative
A community investment program for mobile home parks offers financial tools enabling mobile home park residents to organize and purchase the land that serves their community. Mobile home parks often house moderate- and low-income residents, and this program, which operates as a co-op, protects residents from unexpected rent increases over time. It also empowers residents to complete much-needed deferred maintenance projects.
The Washington State Housing Finance Commission, in partnership with Resident Owned Communities (ROC) Northwest and ROC USA, offers the financial tools and expert guidance for manufactured-housing (“mobile home”) communities to become self-owned cooperatives. The commission works in partnership with ROC USA to provide financing for the purchase, and sometimes improvement, of the property. This financing means a bank loan with favorable terms for the cooperative.

**Tenant Relocation Assistance**
Upzoned neighborhoods may see an increase in demolition of existing housing units to build newer, higher-density housing types. This process displaces existing tenants who then incur moving costs. Local governments, authorized by WAC 365-196-835 and detailed in RCW 59.18.440, can pass an ordinance that requires developers, public funds or a combination of the two to provide relocation funds for these displaced tenants. Tenants at or below 50% of the county median income, adjusted for family size, qualify for available funds. Resident relocation assistance as a result of public action is required, with details outlined in RCW 8.26.

**Just Cause Eviction Protections**
Washington state requires that tenants receive at least 20-day notice when asked to leave a property. However, state law does not require landlords to provide an explanation for the demand. This is particularly disruptive for those without longer-term lease agreements, such as month-to-month tenants. Local jurisdictions can pass just cause eviction protections that mandate that landlords provide tenants a legally justifiable reason when being asked to vacate. Legally justifiable reasons may include failure to pay on time or meet terms of the lease agreement, sale of the building, or owner’s desire to assume occupancy of the unit. This protection does not avoid displacement, but it promotes rental stability and provides legal recourse for residents who are asked to vacate without reasonable justification.

**“Right to Return” Policies for Promoting Home Ownership**
A “right to return” policy works to reverse the effects of past physical displacement by providing down payment assistance for first-time homebuyers who can prove that they have been victims of displacement. Programs may prioritize cases of displacement by direct government action.

In Portland, priority is given to residents of certain neighborhoods whose property, or whose parents’ property was seized through eminent domain, which has historically impacted communities of color and low-income residents at disproportionate rates. Northeast Portland is one qualifying neighborhood, where displacement from public urban renewal projects in the early 2000’s contributed to a dramatic decrease of the neighborhood’s historically Black community.
Regulating Short-term Rentals

Many communities have adopted short-term rental (STR) regulations to reduce their impact on displacement and housing affordability. A first step is to track STR activity by requiring registration and reporting from owners of these units. Policy regulations should prioritize actions that reduce the likelihood of converting long-term rentals into STR’s. Some examples include:

- Restrict short-term rentals to zones allowing tourist accommodations (e.g. City of Chelan)
- Set caps on the number of allowed short-term rentals per host (e.g. Seattle, Okanogan-Methow)
- In a residential zone, limit the number of nights a short-term rental can be rented to guests annually (e.g. Bend, Oregon). This helps minimize the ownership of property purely for use as a full-time short-term rental.
- Require permanent resident occupancy for a period of time prior to the unit being offered for a short-term rental.

In addition, as a mitigation measure, STRs can be charged transient rental or hotel taxes, with revenue contributing to anti-displacement initiatives.

The regulation of short-term rentals can be complex and involve establishing an annual license or permit, standards for the protection of guests and/or standards for the protection of neighbors. There may also be a need for added code enforcement resources.

Strategies to Address Economic Displacement

These are proactive strategies focused on making residents more economically resilient and less vulnerable to rapidly rising housing costs.

Community Land Trusts

A community land trust (CLT) is a non-profit organization, owned by a collective of community members which buys and holds land within a neighborhood. It may raise funds through public or private sources to build structures on this land to be used for community purposes or to be sold to low- or moderate-income residents. These building occupants pay a monthly land lease fee to the trust, which maintains ownership of the land itself. CLT’s build community wealth by cooperatively owning land and provide affordable housing within a neighborhood. They also prevent displacement by keeping ownership of the land and property out of the private market and ensuring that new development serves community goals such as housing affordability. Public policy can support CLT’s by land donation or contributing funds for land acquisition.
Need-based Rehabilitation Assistance
Rehabilitation projects for existing housing that serves low- and moderate-income residents encourages community longevity. Need-based rehabilitation assistance helps low-income, disabled or senior residents make needed home repairs and safety upgrades by offering favorable financing terms or time-limited tax abatements to qualified homeowners. Projects that address weatherization and energy efficiency improvements can improve long-term affordability for the homeowner by reducing monthly energy costs.

- Affordable housing funds can be used to directly provide loans or to partner with non-profit organizations specializing in this type of work.
- RCW 84.37 and RCW 84.38 provide for property tax deferral for homeowners with limited incomes.
- Local housing web sites may also provide information about state and local programs for home repair assistance and help with energy bills.

Down Payment Assistance
Some renters desire long-term investment in a neighborhood through home ownership. Saving enough money for a down payment can take years for many households. Economic displacement pressures can push these households to relocate long before their savings accounts are sufficient for a home purchase. Down payment or assistance programs proactively address this barrier by offering no-interest or low-interest capital for qualified buyers. These programs typically pair with home ownership education courses to encourage financial preparedness for participants. Many programs target first-time home buyers. Home ownership is not the best fit for all households, but many renters pay a mortgage-equivalent in rent and desire the added stability offered by ownership.

Property Tax Assistance Programs
Certain neighborhoods experience dramatic increases to property values that result in proportional increase to property tax values. Longtime residents who own their home but wish to stay in their neighborhood but struggle to keep up with these cost increases can be helped through a property tax assistance program. This currently exists in Washington for widows and widowers of veterans, but other states have introduced programs that offer this assistance to low-income, elderly, or disabled homeowners as well. Maryland’s program extends this benefit to renters who often bear the burden of property tax payments through increased rental rates.
Strategies to Address Cultural Displacement

Strategies addressing cultural displacement preserve business and cultural anchors to maintain the physical spaces that support place-based social networks. These actions protect, foster and minimize physical displacement of existing businesses or anchors and provide for appropriate and affordable commercial/cultural space in new development.

Success stories tend to use multiple strategies to achieve affordable commercial and community space in new development, and at least one non-profit is usually involved.

Grants/Loans to Directly Support Small Businesses

Small businesses and cultural anchors, especially in areas with high displacement risk, may struggle to invest in their space and keep up with rent. Washington state law establishes local governments’ authority to support businesses:

**Economic development programs.** “It shall be in the public purpose for all cities to engage in economic development programs. In addition, cities may contract with nonprofit corporations in furtherance of this and other acts relating to economic development” (RCW 35.21.703)

**Restrictions on city/county funds.** Washington’s prohibition against using general government funds for gifts or loans to private parties for economic development (State Constitution Article 8 Section 7) is often cited as a barrier to supporting businesses and cultural anchors. It can be hard to justify how funding the business or organization provides “necessary support of the poor and infirm.” Instead of using this prohibition to take affordable commercial space off the table, communities are getting creative about how to support their important spaces by using federal and private funds which have greater flexibility than general city/county funds, and a variety of partnerships described below.

**Federal and private funds.** Federal and private funds, without the stringent restrictions on general city/county funds, can pay rent and operating costs. The City of Seattle’s Office of Economic Development’s Small Business Tenant Improvement Fund uses private money and federal funds (outside of the city’s general fun) to support small and Black, indigenous, and people of color (BIPOC)-owned businesses where there is a high risk of displacement. A limited-liability company, overseen by the city but not a city entity itself, manages a federal tax credit program and investor fee revenues.

Seattle uses federal CDBG funds for its Small Business Stabilization Fund and recently shifted further CDBG funds here to better support businesses impacted by the coronavirus pandemic. Seattle’s Cultural Facilities Fund also aids organizations and businesses with initial rent or building improvements.
Community Lenders. Seattle also connects small and entrepreneurial businesses with community lenders. These loans are flexible for meeting a range of needs. Sharia-compliant loans – where no interest is charged and fees are based on profit—are important for businesses who are prohibited from paying interest on loans for religious reasons.

Financing Ground Floor Commercial
Because of state restrictions on city/county funds, financing the commercial space can be more challenging than the affordable housing on the upper floors. However, cities and counties can use federal and private funds. Seattle used federal CDBG funds to support the Liberty Bank Building redevelopment, which includes affordable commercial space and community amenities on the ground floor. Using the federal funds avoids the state restrictions; however, CDBG’s regulatory process and compliance is challenging, especially for smaller projects that can’t absorb that cost.

Preservation Development Authorities (PDA) and Ports
Partnering with PDA’s and ports can also offer flexibility in providing affordable commercial and arts spaces. PDA’s, as quasi-public corporations, serve and are accountable to the public and administer public funds, while having the flexibility of a corporation. PDA’s are particularly useful for developing and maintaining the ground floor space for commercial and arts activities and leasing to businesses and nonprofits. Ground floor improvement costs can otherwise be insurmountable to individual businesses and nonprofits.

Commercial Community Land Trust
Like the Community Land Trust listed above, these nonprofit corporations secure and maintain access to land for public benefit, in this case, to preserve affordable commercial space. Preservation of existing affordable business and cultural space is often more useful than new construction, especially when considering the economics of nonprofit arts organizations that may need specialized physical spaces and micro-businesses that struggle to afford rents in new construction. Land trusts can help preserve existing affordable space or increase affordability in new space.

Community Benefits/Development Agreements
Development agreements, or community benefits agreements, are voluntary, negotiated contracts between a developer and a city/county that specify the public benefits the development will provide and each parties’ responsibilities. They can achieve affordable housing, affordable commercial space, community gathering space and other public amenities. For example, developers can agree to build out the ground floor space for small businesses and cultural anchors, making it more affordable for them to get into a new space, and then gradually afford market rent over time.
Micro-retail and Flexible Cultural Space Design
Preservation of existing affordable space is typically most effective for maintaining affordability, but if you must build new or adapt a space, design the ground floor with nontraditional commercial uses in mind. Making a flexible space for a range of businesses (e.g. restaurants, micro-retail) and arts organizations will reduce initial move-in/tenant improvement costs.

Business incubators, Co-working Spaces, and Artisan/Maker Spaces
These types of share work spaces allow businesses, artists/ artisans, and nonprofits to pool resources in a shared space and spark collaboration. They are typically run by non-profit organizations.

Other strategies
- Racial equity impact assessment and business support during public infrastructure construction
- Business relocation and business planning assistance when physically displaced
- Cooperative ownership models
- Worker-owned cooperatives
- Rental relocation assistance
